phylogenetic DNA based reorganization of higher plants has revolutionized taxonomic treatments of all biological entities  
even when morphology does not completely agree with their organization This book is an example of applying principals of  
botanical phylogenetic taxonomy to assemble genera species and cultivars of 200 vascular plant families of ferns  
gymnosperms and angiosperms that are cultivated for enhancement of human living space homes gardens and parks The  
emphases are on cultivated species but examples of some plants are often shown in the wild and in landscapes In providing  
descriptions it is assumed that students and other interested individuals have no background in general botany plant  
characteristics or nomenclature Fundamental features of all plant groups discussed are fully illustrated by original

watercolor drawings or photographs Discussion of the families is grounded on recent botanical phylogenetic treatments which is based on common ancestry monophyly Of course phylogenetic taxonomy is not a new concept and was originally based on morphological characteristics it is the DNA based phylogeny that has revolutionized modern biological classifications In practical terms this book represents the horticultural treatment that corresponds to phylogenetic based botanical taxonomy to which is added cultigens and cultivated genera and species Hence the harmony between horticultural and botanical taxonomy This book covers phylogenetic based taxonomy of Angiosperms Eudicots A companion volume covers Ferns Gymnosperms and Angiosperms Monocots Betrock's Landscape Palms Alan W.
