Many designers, installers, and inspectors have trouble understanding, interpreting, and applying the electrical requirements listed in the above standards and codes. These requirements have been assembled and correlated in such a manner as to be easily understood. To help expedite the time involved in finding the rules and applying the requirements for general industry sections, in each standard have been listed for fast reference. Designers must design and lay out electrical systems to meet the provisions of the OSHA standards. Installers are required to install and wire electrical systems to comply with the NEC and provide safety for the employee working in his or her workplace. Inspectors must inspect the electrical system to ensure that it not only

complies with the NEC but also provides the necessary safety requirements of OSHA and NFPA 70E The Standard NFPA 70E was developed by NFPA at the request of OSHA OSHA needed this standard to help them keep as current as possible with the requirements in the NEC that pertain to safety related work practices The OSHA standards are rarely changed and therefore lag behind the NEC as well as other codes and standards Throughout the book you will find examples and illustrations as well as the highlighted text Standards to review which interface OSHA NFPA 70E and the NEC where applicable
