## Our Shrinking Globe Implications Pediatric:

**The Epidemiology and Prevention of Childhood Injuries** Hamid Soori, Martha Orendu Oche Attah, 2025-05-20 The Epidemiology and Prevention of Childhood Injuries An Overview takes a comprehensive approach to understanding and addressing childhood injuries. Integrating global research and practice, the book aims to significantly advance injury prevention among children. With detailed chapters on epidemiological measures, risk factors, and prevention strategies, it offers a thorough review of childhood injury contexts. The book covers injuries related to transport, home, school, play, sports, workplace, violence, and disasters. It discusses first aid essentials, accountability, and collaboration, concluding with methodologies, data collection techniques, and outcome assessments. This resource is invaluable for researchers, pediatricians, public health experts, and policymakers seeking to protect children. Offers a reliable up-to-date resource for understanding and addressing epidemiology, risk factors, prevention strategies, and interventions of childhood injuries. Discusses how different social identities can intersect and contribute to disparities in injury rates and outcomes. Explores how social determinants of health such as race, ethnicity, socioeconomic status, and access to healthcare contribute to disparities in injury rates and outcomes. Equips readers with actionable insights, multidisciplinary approaches, and technological innovations that can be applied in various settings to create safer environments for children.

*Pediatric Endocrinology and Diabetes, An Issue of Pediatric Clinics of North America* Denis Daneman, 2015-07-29 The Guest Editors have compiled a comprehensive issue that includes both disorders of endocrinology as well as diabetes. Authors have addressed the following clinical topics: disorders of menstruation, thyroid function, gender dysphoria, hypoglycemia in the nondiabetic child, preventing DKA, short and long term outcomes in diabetes, and whole genome sequencing in endocrinology. These topics represent the current knowledge in the field and pediatricians will have the most updated clinical information as they evaluate and treat children with diabetes or endocrinology disorders.

Evidence-Based Imaging in Pediatrics Hansel J. Otero, Summer L. Kaplan, L. Santiago Medina, C. Craig Blackmore, Kimberly E. Applegate, 2024-08-31 This book provides evidence-based guidance for pediatric imaging to radiologists, pediatricians, and all subspecialists caring for children, as well as policy advocates. While the majority of pediatric radiology books concentrate on diagnosis, this book highlights how imaging should be used in optimal care, allowing comparisons between different modalities and addressing follow-up complications and the issue of timing of imaging. The primary objective of this book is to provide a summary of appropriate imaging use in terms of modality and timing, based on the best available evidence. The book therefore acts as a resource for optimized clinical care of children and effective decision making. A secondary objective is to collate the evidence-based practices that constitute quality care for children in the setting of value-based imaging. Radiologists are often in the position of helping clinicians decide when and how to image children with suspected diseases or confirmed diagnoses. However, traditional residency training has done little to fulfill the need for this up-to-date evidence knowledge. Moreover, in spite of furthering subspecialization of the field,

the great majority of children's imaging and care occur outside of children's hospitals where clinicians and radiologists might need this type of general guidance for establishing best practices. The book is divided in two parts: non-diagnostic considerations such as evidence-based imaging safety, value and the practice of radiology in low-resource settings, and a second, larger clinical component divided in prenatal oncology, neurological, musculoskeletal, cardiothoracic, and abdominal imaging. This new edition incorporates changes in practice and guidelines in the decade since the first edition was written, with many new chapters in emerging topics including prenatal oncology and neurological imaging. This is an ideal guide for radiologists, pediatricians, policy advocates, and all healthcare professionals caring for children. *Oxford Textbook of Global Health of Women, Newborns, Children, and Adolescents* (Delan Devakumar, Jennifer Hall, Zeshan Qureshi, Joy Lawn, 2019). The aim of this book is to provide a summary of the current concepts and challenges in global maternal and child health in a format that appeals to students of the subject, the general public, and current practitioners in the field. It also provides study exercises that may inform tutors on undergraduate and postgraduate courses. *Our Shrinking Globe: Implications for Child Safety, An Issue of Pediatric Clinics of North America* (Avinash Shetty, 2016-01-19). Pediatricians in the United States and around the World continue to face a myriad of global health threats affecting child and adolescent health, including:

- 1. Infectious diseases of poverty e.g. human immunodeficiency virus, HIV, tuberculosis, malaria, and neglected tropical diseases in low- and middle-income countries (LMIC) especially in sub-Saharan Africa.
- 2. Emerging and reemerging infectious diseases such as Ebola.
- 3. Rise of non-communicable diseases e.g. common mental disorders, 4. unintentional injuries, and 5. environmental health hazards e.g. climate change.

Despite the promising news about rapid declines in maternal and child mortality in the era of Millennium Development Goals (MDGs) which originated from the United Nations' UN Millennium Declaration in 2000, only 20% and 7% of LMIC are currently on track to attain the maternal and child mortality targets. For example, 44% of deaths in children younger than 5 years occur in neonates. Besides discovery of life-saving interventions e.g. development of new and improved vaccines for maternal and child health, we also need to do a better job at bridging the knowledge implementation gap and increase the effectiveness of proven interventions. For example, despite the availability of effective vaccines to prevent pneumococcal pneumonia, rotavirus gastroenteritis, and human papilloma virus-related diseases e.g. cervical cancer, use of these vaccines remains suboptimal in LMIC. We need to recognize that global health is also local public health. For example, improving access, equity, and quality of care for orphans and vulnerable children, immigrant and newly arrived refugee children in the U.S. remains a challenge. Timely access to psychiatric care for children and adolescents with mental illness is a major concern. The explosion of new age technology such as the internet also poses a considerable risk to children and adolescents. Pediatricians also need to be aware of diverse socio-cultural determinants of health and ethical issues in global health service and delivery. This issue of *Pediatric Clinics of North America* aims to address the above crucial global health challenges affecting children and adolescents. As practicing pediatricians, we have the unique opportunity to influence

local and global public health In the post MDG era beyond 2015 collaborative partnerships between various disciplines and across research education and service is vital to reduce health inequities in children worldwide **Burns' Pediatric Primary Care E-Book** Dawn Lee Garzon,Nancy Barber Starr,Margaret A.
