Notes on Statistics and Data Quality for Analytical Chemists Michael Thompson, Philip J. Lowthian, 2011 This book is intended to help analytical chemists feel comfortable with more commonly used statistical operations and help them make effective use of the results Emphasis is put upon computer based methods that are applied in relation to measurement and the quality of the resulting data The book is intended for analytical chemists working in industry but is also appropriate for students taking first degrees or an MSc in analytical chemistry The authors have divided this book into quite short sections each dealing with a single topic The sections are as far as possible selfcontained but are extensively cross referenced The book can therefore be used either systematically by reading the sections sequentially or as a quick reference by going directly to the topic of interest Every statistical method and application covered has at least one example where the results are analysed in detail This enables readers to emulate this analysis on their own examples All of the datasets used in examples are available for download so that readers can compare their own output with that of the book and thus verify that they are entering data correctly into the statistical package that they happen to use

Improving Working Memory in Learning and Intellectual Disabilities Silvia Lanfranchi, Barbara Carretti, 2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual disabilities ID and several researchers have hypothesized that this can be linked to their difficulties in learning cognition and everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our understanding of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most studies converge in demonstrating specific effects of WM training i e improvements in the trained tasks but few transfer effects to allied cognitive processes are generally reported It is worth noting that any maintenance effects when investigated are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such changes

Conferences on Artificial Intelligence, Mexican Society for Artificial Intelligence, 2003 [Mathematical Models for Remote Sensing Image Processing](#) Gabriele Moser, Josiane Zerubia, 2017-11-28 This book maximizes reader insights into the field of mathematical models and methods for the processing of two dimensional remote sensing images. It presents a broad analysis of the field encompassing passive and active sensors, hyperspectral images, synthetic aperture radar, SAR, interferometric SAR and polarimetric SAR data. At the same time it addresses highly topical subjects involving remote sensing data types e.g. very high resolution images, multiangular or multiresolution data and satellite image time series and analysis methodologies e.g. probabilistic graphical models, hierarchical image representations, kernel machines, data fusion and compressive sensing that currently have primary importance in the field of mathematical modelling for remote sensing and image processing. Each chapter focuses on a particular type of remote sensing data and/or on a specific methodological area presenting both a thorough analysis of the previous literature and a methodological and experimental discussion of at least two advanced mathematical methods for information extraction from remote sensing data. This organization ensures that both tutorial information and advanced subjects are covered. With each chapter being written by research scientists from at least two different institutions it offers multiple professional experiences and perspectives on each subject. The book also provides expert analysis and commentary from leading remote sensing and image processing researchers many of whom serve on the editorial boards of prestigious international journals in these fields and are actively involved in international scientific societies. Providing the reader with a comprehensive picture of the overall advances and the current cutting edge developments in the field of mathematical models for remote sensing image analysis this book is ideal as both a reference resource and a textbook for graduate and doctoral students as well as for remote sensing scientists and practitioners
