Ontology Based Interpretation Of Natural Language Christina Unger:

Ontology-Based Interpretation of Natural Language Philipp Cimiano, Christina Unger, John McCrae, 2014-03-01 For humans understanding a natural language sentence or discourse is so effortless that we hardly ever think about it For machines however the task of interpreting natural language especially grasping meaning beyond the literal content has proven extremely difficult and requires a large amount of background knowledge This book focuses on the interpretation of natural language with respect to specific domain knowledge captured in ontologies The main contribution is an approach that puts ontologies at the center of the interpretation process This means that ontologies not only provide a formalization of domain knowledge necessary for interpretation but also support and guide the construction of meaning representations We start with an introduction to ontologies and demonstrate how linguistic information can be attached to them by means of the ontology lexicon model lemon These lexica then serve as basis for the automatic generation of grammars which we use to compositionally construct meaning representations that conform with the vocabulary of an underlying ontology As a result the level of representational granularity is not driven by language but by the semantic distinctions made in the underlying ontology and thus by distinctions that are relevant in the context of a particular domain We highlight some of the challenges involved in the construction of ontology based meaning representations and show how ontologies can be exploited for ambiguity resolution and the interpretation of temporal expressions Finally we present a question answering system that combines all tools and techniques introduced throughout the book in a real world application and sketch how the presented approach can scale to larger multi domain scenarios in the context of the Semantic Web

Bayesian Analysis in Natural Language Processing Shay Cohen, 2022-11-10 Natural language processing NLP went through a profound transformation in the mid 1980s when it shifted to make heavy use of corpora and data driven techniques to analyze language Since then the use of statistical techniques in NLP has evolved in several ways One such example of evolution took place in the late 1990s or early 2000s when full fledged Bayesian machinery was introduced to NLP This Bayesian approach to NLP has come to accommodate for various shortcomings in the frequentist approach and to enrich it especially in the unsupervised setting where statistical learning is done without target prediction examples We cover the methods and algorithms that are needed to fluently read Bayesian learning papers in NLP and to do research in the area These methods and algorithms are partially borrowed from both machine learning and statistics and are partially developed in house in NLP We cover inference techniques such as Markov chain Monte Carlo sampling and variational inference Bayesian estimation and nonparametric modeling We also cover fundamental concepts in Bayesian statistics such as prior distributions conjugacy and generative modeling Finally we cover some of the fundamental modeling techniques in NLP such as grammar modeling and their use with Bayesian analysis

Natural Language Processing for Social Media, Third Edition Anna Atefeh Farzindar, Diana Inkpen, 2022-05-31 In recent years online social networking has revolutionized interpersonal communication The newer

research on language analysis in social media has been increasingly focusing on the latter's impact on our daily lives both on a personal and a professional level. Natural language processing (NLP) is one of the most promising avenues for social media data processing. It is a scientific challenge to develop powerful methods and algorithms that extract relevant information from a large volume of data coming from multiple sources and languages in various formats or in free form. This book will discuss the challenges in analyzing social media texts in contrast with traditional documents. Research methods in information extraction, automatic categorization and clustering, automatic summarization and indexing, and statistical machine translation need to be adapted to a new kind of data. This book reviews the current research on NLP tools and methods for processing the non-traditional information from social media data that is available in large amounts and it shows how innovative NLP approaches can integrate appropriate linguistic information in various fields such as social media monitoring, health care, and business intelligence. The book further covers the existing evaluation metrics for NLP and social media applications and the new efforts in evaluation campaigns or shared tasks on new datasets collected from social media. Such tasks are organized by the Association for Computational Linguistics such as SemEval tasks, the National Institute of Standards and Technology via the Text REtrieval Conference (TREC) and the Text Analysis Conference (TAC), or the Conference and Labs of the Evaluation Forum (CLEF). In this third edition of the book, the authors added information about recent progress in NLP for social media applications including more about the modern techniques provided by deep neural networks (DNNs) for modeling language and analyzing social media data.

Explainable Natural Language Processing Anders

Søgaard, 2022-06-01 This book presents a taxonomy framework and survey of methods relevant to explaining the decisions and analyzing the inner workings of Natural Language Processing (NLP) models. The book is intended to provide a snapshot of Explainable NLP though the field continues to rapidly grow. The book is intended to be both readable by first-year M.Sc. students and interesting to an expert audience. The book opens by motivating a focus on providing a consistent taxonomy pointing out inconsistencies and redundancies in previous taxonomies. It goes on to present i) a taxonomy or framework for thinking about how approaches to explainable NLP relate to one another, ii) brief surveys of each of the classes in the taxonomy with a focus on methods that are relevant for NLP, and iii) a discussion of the inherent limitations of some classes of methods as well as how to best evaluate them. Finally, the book closes by providing a list of resources for further research on explainability.

Linguistic Fundamentals for Natural Language Processing II Emily M. Bender, Alex

Lascarides, 2022-06-01 Meaning is a fundamental concept in Natural Language Processing (NLP) in the tasks of both Natural Language Understanding (NLU) and Natural Language Generation (NLG). This is because the aims of these fields are to build systems that understand what people mean when they speak or write and that can produce linguistic strings that successfully express to people the intended content. In order for NLP to scale beyond partial task-specific solutions, researchers in these fields must be informed by what is known about how humans use language to express and understand communicative intents.

The purpose of this book is to present a selection of useful information about semantics and pragmatics as understood in linguistics in a way that is accessible to and useful for NLP practitioners with minimal or even no prior training in linguistics

Natural Language Processing and Information Systems Rafael Munoz, Andres Montoyo, Elisabeth Metais, 2011-06-16 This book constitutes the refereed proceedings of the 16th International Conference on Applications of Natural Language to Information Systems held in Alicante Spain in June 2011 The 11 revised full papers and 11 revised short papers presented together with 23 poster papers 1 invited talk and 6 papers of the NLDB 2011 doctoral symposium were carefully reviewed and selected from 74 submissions The papers address all aspects of Natural Language Processing related areas and present current research on topics such as natural language in conceptual modeling NL interfaces for data base querying retrieval NL based integration of systems large scale online linguistic resources applications of computational linguistics in information systems management of textual databases NL on data warehouses and data mining NLP applications as well as NL and ubiquitous computing

Embeddings in Natural Language Processing Mohammad Taher Pilehvar, Jose Camacho-Collados, 2020-11-13 Embeddings have undoubtedly been one of the most influential research areas in Natural Language Processing NLP Encoding information into a low dimensional vector representation which is easily

integrable in modern machine learning models has played a central role in the development of NLP Embedding techniques initially focused on words but the attention soon started to shift to other forms from graph structures such as knowledge bases to other types of textual content such as sentences and documents This book provides a high level synthesis of the main embedding techniques in NLP in the broad sense The book starts by explaining conventional word vector space models and word embeddings e g Word2Vec and GloVe and then moves to other types of embeddings such as word sense sentence and document and graph embeddings The book also provides an overview of recent developments in contextualized representations e g ELMo and BERT and explains their potential in NLP Throughout the book the reader can find both essential information for understanding a certain topic from scratch and a broad overview of the most successful techniques developed in the literature

Ontology and the Lexicon Chu-ren Huang, Nicoletta Calzolari, Aldo Gangemi, Alessandro Lenci, Alessandro Oltramari, Laurent Prevot, 2022-12-15 The relation between ontologies and language is currently at the forefront of natural language processing NLP Ontologies as widely used models in semantic technologies have much in common with the lexicon A lexicon organizes words as a conventional inventory of concepts while an ontology formalizes concepts and their logical relations A shared lexicon is the prerequisite for knowledge sharing through language and a shared ontology is the prerequisite for knowledge sharing through information technology In building models of language computational linguists must be able to accurately map the relations between words and the concepts that they can be linked to This book focuses on the technology involved in enabling integration between lexical resources and semantic technologies It will be of interest to researchers and graduate students in NLP computational
