OSGi in Action Karl Pauls, David Savage, Stuart McCulloch, Richard Hall, 2011-04-05 What is OSGi Simply put OSGi is a standardized technology that allows developers to create the highly modular Java applications that are required for enterprise development OSGi lets you install start stop update or uninstall components without taking down your entire system The interest in OSGi based applications has exploded since major vendors like Sun Spring Oracle BEA and IBM have gotten behind the standard OSGi in Action is a comprehensive guide to OSGi with two primary goals First it provides a clear introduction to OSGi concepts with examples that are relevant both for architects and developers Then it explores numerous practical scenarios and techniques answering questions like How much of OSGi do you actually need How do you embed OSGi inside other containers What are the best practices for moving legacy systems to OSGi Purchase of the print book comes with an offer of a free PDF ePub and Kindle eBook from Manning Also available is all code from the book An Introduction To

Component-based Software Development Kung-kiu Lau, Simone Di Cola, 2017-06-29 The book provides a comprehensive coverage of the widely accepted desiderata of component based software development as well as the foundations that these desiderata necessitate Its unique focus is on component models the cornerstone of component based software development In addition it presents and analyses existing approaches according to these desiderata This compendium is an indispensable textbook for an advance undergraduate or postgraduate course unit Researchers will also find this volume an essential reference material Serious Games and Edutainment Applications Minhua Ma, Andreas Oikonomou, 2017-03-03 With the continued application of gaming for training and education which has seen exponential growth over the past two decades this book offers an insightful introduction to the current developments and applications of game technologies within educational settings with cutting edge academic research and industry insights providing a greater understanding into current and future developments and advances within this field Following on from the success of the first volume in 2011 researchers from around the world presents up to date research on a broad range of new and emerging topics such as serious games and emotion games for music education and games for medical training to gamification bespoke serious games and adaptation of commercial off the shelf games for education and narrative design giving readers a thorough understanding of the advances and current issues facing developers and designers regarding games for training and education This second volume of Serious Games and Edutainment Applications offers further insights for researchers designers and educators who are interested in using serious games for training and educational purposes and gives game developers with detailed information on current topics and developments within this growing area Software Engineering for Collective Autonomic Systems Martin Wirsing, Matthias Hözl, Nora Koch, Philip Mayer, 2015-03-03 A collective autonomic system consists of collaborating autonomic entities which are able to adapt at runtime adjusting to the state of the environment and incorporating new knowledge into their behavior These highly dynamic systems are also known as ensembles To ensure correct behavior of

ensembles it is necessary to support their development through appropriate methods and tools which can guarantee that an autonomic system lives up to its intended purpose this includes respecting important constraints of the environment This State of the Art Survey addresses the engineering of such systems by presenting the methods tools and theories developed within the ASCENS project ASCENS was an integrated project funded in the period 2010 2015 by the 7th Framework Programme FP7 of the European Commission as part of the Future Emerging Technologies Proactive Initiative FET Proactive The 17 contributions included in this book are organized in four parts corresponding to the research areas of the project and their concrete applications I language and verification for self awareness and self expression II modeling and theory of self aware and adaptive systems III engineering techniques for collective autonomic systems and last but not least IV challenges and feedback provided by the case studies of the project in the areas of swarm robotics cloud computing and e mobility
