Optimization, Simulation, and Control Altannar Chinchuluun, Panos M. Pardalos, Rentsen Enkhbat, Efstratios N. Pistikopoulos, 2012-11-28 Optimization simulation and control play an increasingly important role in science and industry. Because of their numerous applications in various disciplines, research in these areas is accelerating at a rapid pace. This volume brings together the latest developments in these areas of research as well as presents applications of these results to a wide range of real world problems. The book is composed of invited contributions by experts from around the world who work to develop and apply new optimization simulation and control techniques either at a theoretical level or in practice. Some key topics presented include equilibrium problems, multi objective optimization, variational inequalities, stochastic processes, numerical analysis, optimization in signal processing and various other interdisciplinary applications. This volume can serve as a useful resource for researchers, practitioners and advanced graduate students of mathematics and engineering working in research areas where results in optimization simulation and control can be applied. [Selected Regular Lectures from the 12th International Congress on Mathematical Education](#) Sung Je Cho, 2015-07-16 This book comprises the full selected Regular Lectures from the Proceedings of the 12th International Congress on Mathematical Education ICME 12 which was held at COEX in Seoul, Korea from July 8th to 15th, 2012. ICME 12 brought together 4700 experts from 100 countries working to understand all of the intellectual and attitudinal challenges in the subject of mathematics education as a multidisciplinary research and practice. These selected Regular Lectures present the work of fifty-one prominent mathematics educators from all over the globe. The Lectures cover a wide spectrum of topics, themes and issues and aim to give direction to future research towards educational improvement in the teaching and learning of mathematics education. This book is of particular interest to researchers, teachers and curriculum developers in mathematics education. *Intelligent Computer Mathematics* Cezary Kaliszyk, Edwin Brady, Andrea Kohlhase, Claudio Sacerdoti Coen, 2019-07-02 This book constitutes the refereed proceedings of the 12th International Conference on Intelligent Computer Mathematics CICM 2019 held in Prague, Czech Republic in July 2019. The 19 full papers presented were carefully reviewed and selected from a total of 41 submissions. The papers focus on digital and computational solutions which are becoming the prevalent means for the generation, communication, processing, storage and curation of mathematical information. Separate communities have developed to investigate and build computer-based systems for computer algebra, automated deduction and mathematical publishing as well as novel user interfaces. While all of these systems excel in their own right, their integration can lead to synergies offering significant added value. *Statistical Methods for QTL Mapping* Zehua Chen, 2013-11-01 While numerous advanced statistical approaches have recently been developed for quantitative trait loci (QTL) mapping, the methods are scattered throughout the literature. *Statistical Methods for QTL Mapping* brings together many recent statistical techniques that address the data complexity of QTL mapping. After introducing basic genetics topics and statistical principles, the author

discusses the principles of quantitative genetics general statistical issues of QTL mapping commonly used one dimensional QTL mapping approaches and multiple interval mapping methods He then explains how to use a feature selection approach to tackle a QTL mapping problem with dense markers The book also provides comprehensive coverage of Bayesian models and MCMC algorithms and describes methods for multi trait QTL mapping and eQTL mapping including meta trait methods and multivariate sequential procedures This book emphasizes the modern statistical methodology for QTL mapping as well as the statistical issues that arise during this process It gives the necessary biological background for statisticians without training in genetics and likewise covers statistical thinking and principles for geneticists Written primarily for geneticists and statisticians specializing in QTL mapping the book can also be used as a supplement in graduate courses or for self study by PhD students working on QTL mapping projects

Coping with Uncertainty Kurt Marti, Yuri Ermoliev, Marek Makowski, 2009-12-24
Support for addressing the on going global changes needs solutions for new scientific problems which in turn require new concepts and tools A key issue concerns a vast variety of irreducible uncertainties including extreme events of high multidimensional consequences e g the climate change The dilemma is concerned with enormous costs versus massive uncertainties of extreme impacts Traditional scientific approaches rely on real observations and experiments Yet no sufficient observations exist for new problems and pure experiments and learning by doing may be expensive dangerous or impossible In addition the available historical observations are often contaminated by past actions and policies Thus tools are presented for the explicit treatment of uncertainties using synthetic information composed of available hard data from historical observations the results of possible experiments and scientific facts as well as soft data from experts opinions and scenarios
