## Google Maps Best:

Beginning Google Maps Applications with Rails and Ajax Andre Lewis, Cameron Turner, Jeffrey Sambells, Michael Purvis, 2007-05-02 The Google Maps API remains one of the showcase examples of the Web 2.0 development paradigm. *Beginning Google Maps Applications with Rails and Ajax: From Novice to Professional* is the first book to comprehensively introduce the service from a developer perspective showing you how you can integrate mapping features into your Rails driven web applications. Proceeding far beyond simplistic map display you'll learn how to draw from a variety of data sources such as the U.S. Census Bureau's TIGER Line data and Google's own geocoding feature to build comprehensive geocoding services for mapping many locations around the world. The book also steers you through various examples that show how to encourage user interaction such as through pinpointing map locations, adding comments, and building community driven maps. You'll want to pick up a copy of this book because this is the first book to comprehensively introduce the Google Maps application development using the Rails development framework. You'll be introduced to the very latest changes to the Google Maps API embodied in the version 2 release. It is written by four developers actively involved in the creation of location based mapping services. For additional info please visit the author's reference site for this book. **Beginning Google Maps**

**Mashups with Maplets, KML, and GeoRSS** Sterling Udell, 2008-11-21 *Beginning Google Maps Mashups with Maplets: KML and GeoRSS* is a beginner's guide to creating web mashups using Google mapping technology. Serves as a single source primer to displaying data on Google Maps. Covers both Maplets and the Google Maps API. Provides everything you need to start participating in the geographic Web. What you'll learn: Mash up GeoWeb services onto a Google map. Package your mashup as a maplet and publish it to maps.google.com. Enhance your map with driving directions, local search, map advertising, and more. Discover common Google mapping mistakes to avoid. Find out how and when to geocode existing data into mappable coordinates. Deliver your own data as GeoXML. Who this book is for: This book is for web designers and developers who have not worked with Google Maps or geographic data before. A working knowledge of HTML is required and some programming experience is beneficial. *Beginning Google Maps Applications with PHP and Ajax* Jeffrey

Sambells, Michael Purvis, Cameron Turner, 2007-12-22 Until recently building interactive web based mapping applications has been a cumbersome affair. This changed when Google released its powerful Maps API. *Beginning Google Maps Applications with PHP and Ajax* was written to help you take advantage of this technology in your own endeavors whether you're an enthusiast playing for fun or a professional building for profit. This book covers version 2 of the API including Google's new Geocoding service. Authors Jeffrey Sambells, Cameron Turner, and Michael Purvis get rolling with examples that require hardly any code at all but you'll quickly become acquainted with many facets of the Maps API. They demonstrate powerful methods for simultaneously plotting large data sets, creating your own map overlays, and harvesting and geocoding sets of addresses. You'll see how to set up alternative tile sets and where to access imagery to use for them. The authors even show

you how to build your own geocoder from scratch for those high volume batch jobs As well as providing hands on examples of real mapping projects this book supplies a complete reference for the Maps API along with the relevant aspects of JavaScript CSS PHP and SQL Visit the authors website for additional tips and advice *Web Cartography* Ian Muehlenhaus,2013-12-10
