Mothers Babies And Cocaine The Role Of Toxins In Development:

Mothers, Babies, and Cocaine Michael Lewis, Margaret Bendersky, 1995 A fetus cannot just say no to drugs Use of substances of abuse during pregnancy has skyrocketed in recent years due in part to the ready availability of crack cocaine The media have decried the burdens on our health care and educational systems imposed by the adverse consequences of prenatal exposure to cocaine But how much do we really know about the effects of this insult Is prenatal cocaine exposure a convenient excuse for the adverse outcomes associated with a myriad of physical and social ills afflicting the drug using population This volume presents the most recent scientifically based knowledge about prenatal exposure to substances of abuse Written by prominent researchers in the field it describes what we do and do not know about the mechanisms of the action of cocaine on the developing brain strategies for studying this complex issue the implications of drug exposure and a drug using environment for long term functioning in the cognitive social and emotional domains and possible intervention strategies to prevent developmental problems in children at high risk This volume will be a valuable addition to the libraries of researchers policymakers and practitioners concerned about cocaine exposed infants *Environmental Effects on Cognitive Abilities* Robert J. Sternberg, Elena L. Grigorenko, 2014-04-08 This bk explores how the environment influences development maintenance of cognitive abilities It offers both a response to those who focus primarily on genes as determinants of developmental outcomes and an elaboration of just what it is about contexts that makes for their effects on these outcomes

Human Developmental Neurotoxicology David C. Bellinger, 2006-04-06 This reference describes the most recent developments in the design execution and interpretation of human developmental neurotoxicology studies Assessing critical issues and controversies in the field this guide focuses on dose response effect relationships and explores challenges in the measurement of exposure to different types of chemicals *Neurodevelopmental Mechanisms in Psychopathology* Dante Cicchetti, Elaine F. Walker, 2003-08-18 This volume represents a burgeoning perspective on the origins of psychopathology one that focuses on the development of the human central nervous system The contemporary neurodevelopmental perspective assumes that mental disorders result from etiologic factors that alter the normal course of brain development Defined here in its broadest sense neurodevelopment is a process that begins at conception and extends throughout the life span We now know that it is a complex process and that its course can be altered by a host of factors ranging from inherited genetic liabilities to psychosocial stressors This book features the very best thinking in the converging fields of developmental neuroscience and developmental psychopathology The developmental window represented is broad extending from the prenatal period through adulthood and the authors cover a broad range of etiologic factors and a spectrum of clinical disorders Moreover the contributors did not hesitate to use the opportunity to hypothesize about underlying mechanisms and to speculate on research directions *Pathways of Addiction* Institute of Medicine, Committee on Opportunities in Drug Abuse Research, 1996-11-01 Drug abuse persists as one of the most costly and contentious problems on the nation's agenda

Pathways of Addiction meets the need for a clear and thoughtful national research agenda that will yield the greatest benefit from today's limited resources. The committee makes its recommendations within the public health framework and incorporates diverse fields of inquiry and a range of policy positions. It examines both the demand and supply aspects of drug abuse. Pathways of Addiction offers a fact-filled, highly readable examination of drug abuse issues in the United States, describing findings and outlining research needs in the areas of behavioral and neurobiological foundations of drug abuse. The book covers the epidemiology and etiology of drug abuse and discusses several of its most troubling health and social consequences, including HIV, violence, and harm to children. Pathways of Addiction looks at the efficacy of different prevention interventions and the many advances that have been made in treatment research in the past 20 years. The book also examines drug treatment in the criminal justice setting and the effectiveness of drug treatment under managed care. The committee advocates systematic study of the laws by which the nation attempts to control drug use and identifies the research questions most germane to public policy. Pathways of Addiction provides a strategic outline for wise investment of the nation's research resources in drug abuse. This comprehensive and accessible volume will have widespread relevance to policymakers, researchers, research administrators, foundation decisionmakers, healthcare professionals, faculty, and students, and concerned individuals.

Infant Formula Institute of Medicine, Food and Nutrition Board, Committee on the Evaluation of the Addition of Ingredients New to Infant Formula, 2004-06-10. Infant formulas are unique because they are the only source of nutrition for many infants during the first 4 to 6 months of life. They are critical to infant health since they must safely support growth and development during a period when the consequences of inadequate nutrition are most severe. Existing guidelines and regulations for evaluating the safety of conventional food ingredients, e.g., vitamins and minerals added to infant formulas, have worked well in the past; however, they are not sufficient to address the diversity of potential new ingredients proposed by manufacturers to develop formulas that mimic the perceived and potential benefits of human milk. This book, prepared at the request of the Food and Drug Administration (FDA) and Health Canada, addresses the regulatory and research issues that are critical in assessing the safety of the addition of new ingredients to infants.

Processing Sal Soraci, Kimiyo Murata-Soraci, 2003-03-30 Visual information processing in humans with intellectual disabilities and in animals is presented for conceptual and methodological reasons. Much of the evolutionary path of higher primate species has involved the development of sophisticated visual systems that interact with complex higher order cognitive processes. Key questions in cognitive science address the manner in which the environment is represented by the organism and thus relate to how knowledge about the world is gleaned with implications for theories of action and decision making. Finally, it has become apparent that the distinction between perceptual and cognitive processes is not always a clear one and that these processes interact in critical ways in underlying complex behavioral repertoires. Consistent with the emphasis in this series on individual differences, both typical and atypical development are explored here. Philosophical approaches to visualism are also presented. Chapters have import both for basic science and for the development of applications.
