Crowe, 1984 Optical Radiation Detectors Eustace L Dereniak and Devon G Crowe Offers a comprehensive integrated treatment of optical radiation detectors discussing their capabilities and limitations Background material on radiometry noise sources and detector physics is introduced followed by more detailed discussions of photon detectors thermal detectors and charge transfer arrays of detectors **Chemiluminescence in Analytical**

Chemistry Ana M. Garcia-Campana, 2001-03-23 This volume details the theories mechanisms technologies and trends for solving qualitative and quantitative problems in diverse areas of analytical research emphasizing physicochemical principles It focuses on deriving simpler and more extensive chemiluminescence CL detectors reflecting miniaturization trends including narrow band and capillary liquid chromatography versus high performance liquid chromatography and miniaturized high performance thin layer chromatography It also covers the sensitivity selectivity wide detection range and versatility of CL based methodologies **Infrared Detectors and Systems** E. L. Dereniak, G. D. Boreman, 1996-04-19

Infrared Detectors and Systems offers a deep and detailed examination of the optical detection process and the electronics of mimicking the eye It further explores recent research in new detector materials and the latest advances in optical detectors This text covers the range of subjects necessary for the understanding of modern infrared imaging systems at a level appropriate for seniors or first year graduate students in physics or electrical engineering The first six chapters focus on fundamental background issues of radiation detection beginning with the basics of geometrical optics and finishing with a discussion of the figures of merit used for describing the signal to noise performance of a detector system Other topics include radiometry and flux transfer issues basic radiation detector mechanisms and random process mathematics The book concludes with a close look at infrared detection systems and related issues In the discussion of infrared search systems the range equation is developed in terms of the optical and detector parameters of the system A separate chapter is devoted to modulation transfer function a spatial frequency domain description of image quality The final chapter describes the design equations for thermal imager systems in terms of noise equivalent temperature difference and minimum resolvable temperature Supported and clarified by 470 illustrations and accompanied by an extensive glossary of the nomenclature this is an excellent text for graduate and senior level courses in radiometry and infrared detectors It is also a valuable reference for practicing engineers involved in the use design analysis and testing of infrared detector based systems **Optical**

Detection Theory for Laser Applications Gregory R. Osche, 2002-08-08 A comprehensive treatment of the fundamentals of

optical detection theory Laser system applications are becoming more numerous particularly in the fields of communications and remote sensing This book addresses the theoretical aspects of optical detection and associated phenomenologies describing the fundamental optical statistical and mathematical principles of the modern laser system The book is especially valuable for its extensive treatment of direct detection statistics which has no analog in radar detection theory and which has never before been compiled in a cohesive manner in a single book
