Real-Time Business Intelligence Malu Castellanos, Umeshwar Dayal, Renée J. Miller, 2010-07-23 In today's competitive and highly dynamic environment organizations need new solutions to enable them to solve modern business problems and to make decisions using integrated trustworthy and up to date data. Modern real time enterprises need to act on events as they happen. They need new easy to use intelligent solutions capable of analyzing heterogeneous real time enterprise data to provide insight and actionable information at the right time. To enable real time enterprises we need fundamental advancements in the science and engineering that underlie intelligent information management including the management of streaming data, the modeling, analysis and management of unstructured data along with the integrated use of unstructured, semi-structured and structured data. We need new models and paradigms that raise the level of abstraction used in such critical technologies as ETL, data warehousing and event and business process modeling. The series of BIRTE workshops aims to provide a forum to discuss and advance the foundational science and engineering required to enable real time business intelligence and the novel applications and solutions that build on these foundational techniques. Following the success of our first workshop BIRTE 2006 held in Seoul, Korea in conjunction with VLDB 2006 and our second workshop BIRTE 2008 held in Auckland, New Zealand with VLDB 2008 our third workshop was held in Lyon, France on August 24 2009 with VLDB 2009.
