Approaches to Ethnography Colin Jerolmack, Shamus Khan, 2017-10-23 No ethnographer can record and analyze everything that she encounters in the field We must make choices about what to look at and how to look at it which means privileging some aspects of social life while bracketing others *Approaches to Ethnography* enumerates the key analytic strategies which Jerolmack and Khan call approaches that ethnographers deploy to tame the buzzing confusion of the social world The book identifies eight approaches that typify ethnography which it groups and compares along four axes 1 Micro organizational and macro 2 people and places and mechanisms 3 dispositions and situations and 4 reflexivity Each approach

it is shown enables the illumination of a distinct dimension of the social world Every chapter is written by a seasoned ethnographer who enumerates one of the approaches and reflects on how that approach shapes their field site selection observations and analysis Taken as a whole the chapters show how these approaches which operate more like sensitizing devices than theoretical mandates can play a greater role in guiding the kinds of questions that get asked and answered in the field than whether one adopts an inductive or deductive stance toward theory Engaging accessible and often inspiring Approaches to Ethnography offers a practical and novel way to teach evaluate and conceptualize ethnographic research

Angela Mazzetti,2023 In this case study I explore the advantages and disadvantages of adopting participant observation as a research method in an organizational setting The case study is based on my personal research experiences of adopting participant observation as the main method of research during a long term research project with three fire and rescue services and an independent fire training company I put forward the case that participant observation is an appropriate research method for investigating complex organizational concepts such as culture because the method enables the researcher to better connect with the everyday realities of organizational life Nonetheless I reflect on the practical ethical and emotional challenges I encountered during my research which included gaining and maintaining access gaining informed consent and dealing with mixed emotions throughout the research process I set out some recommendations for those wanting to engage in participant observation as part of their undergraduate degree research such as formalizing access agreements being realistic about the emotional impact of their research and looking for shorter term approaches that better fit in with the timeframe of an undergraduate degree **Participant Observation in Organizational Settings** Robert Bogdan,1972

Participant Observation Constantine Manolchev, Stephanie Rose Foley, 2021 This SAGE case study demonstrates the practical application of participant observation as a research methodology in its use by students during an undergraduate field trip module Participant observation requires researchers to engage in the systematic description of events and interactions as framed by a research question to produce a rich and detailed record of the observed reality Furthermore researchers are required to adopt one of four available participant observation roles Complete Participant Participant as Observer Observer as Participant and Complete Observer each with role specific opportunities and limitations The case study offers examples of observations collected and recorded by students during a field trip module in New York City as part of their final year undergraduate research project It also showcases the value of participant observation in enabling students to collect rich primary data in the presence of research limitations such as narrow time scales for data collection reduced access to research participants or limited access to data Although typically requiring prolonged 6 12 months fieldwork this case study provides strategies for educators to successfully implement and teach participant observation over much shorter timescales in this case in the course of a week of in situ engagement **Knowing Children** Gary A. Fine, Kent L.

Sandstrom, 1988-09 When studying children too often it is assumed that our view of the world will be their view of the world **Knowing Children** explores this lofty assumption and explodes various myths that researchers commonly hold about children Using the assumptions that minors are knowledgeable about their world and that the worlds of minors are special and noteworthy Fine and Sandstrom explore the worlds of children and demonstrate that adults can greatly benefit from studying their worlds through the use of qualitative research methods In this insightful volume Fine and Sandstrom present timely methodological statements on doing participant observation with children Drawing on case studies of children from three age groups they provide the first extended treatment of methodological problems with qualitative research involving children which integrates previous writings They cover general issues involved in research with children focusing on methodological and ethical concerns as well This volume provides a fresh view of the worlds of children while providing an invaluable reference for the ethnographic researcher **Knowing Children** helps the researcher understand how and why children react to adults doing ethnographic research This work will prove to be specifically of interest to applied researchers in child development and education It will also be of interest to those in other human services and more traditional ethnographic fields *A Participant Observation Study of an Outdoor Education/experiential Curriculum Experiment Operating in a*

Public Secondary School William Harold Martin, 1977 *Listening to People* Annette Lareau, 2021 Sociologist of education

Annette Lareau is renowned in her field for her compassionate ethnographic work and the insightful ideas she's able to draw from it. With *Listening to People*, she has given us an extremely practical guide to doing the kind of work she has been celebrated for. Lareau covers just about everything a social scientist needs to know: formulating a topic and honing it down to a good research question, obtaining IRB approval, finding a site and making introductions, conducting high quality interviews and participant observation, taking good notes and writing them up later, analyzing the data, and best of all, making clear how much the data analysis and the writing are part of the same process. Her tone throughout is about as straightforward as it gets, and she very generously shares stories of her own mistakes, missteps, and anxieties. Written for students and scholars in sociology, education, communications, social work, and possibly political science, anthropology, and related fields, the book will be an indispensable guide for graduate students and faculty in the social sciences broadly conceived, and is even suitable for undergraduates.
