When you need answers quickly the Oracle PL SQL Language Pocket Reference will save you hours of frustration. **Oracle PL/SQL Built-ins Pocket Reference** Steven Feuerstein, John Beresniewicz, Chip Dawes, 1998 This pocket reference provides quick reference information that will help you use Oracle Corporation's extensive set of built in functions and packages including those new to Oracle8. Oracle's PL SQL language is a programming language providing procedural extensions to the SQL relational database language and to an ever growing number of Oracle development tools. Among the most useful constructs in the PL SQL language are the built in functions and packages. Built in functions are constructs that operate on certain types of data e.g. numeric character to return a result. By using functions you can minimize the coding you need to do in your programs. Functions are described in detail in Steven Feuerstein's Oracle PL SQL Programming this comprehensive guide to building applications with PL SQL has become the bible for PL SQL developers who have raved about its completeness, readability and practicality. Built in functions fall into several major categories. Character functions Operate on character data. Examples include CONCAT concatenates two strings into one, LENGTH returns the length of a string and REPLACE replaces a character sequence in a string with a different set of characters. Date functions Operate on dates and supplement the DATE datatype. Examples include SYSDATE returns the current date and time in the Oracle Server and LAST\_DAY returns the last day in the month of the specified date. Numeric functions Operate on numeric data. Examples include CEIL returns the smallest integer greater than or equal to the specified number and POWER returns a number raised to a particular power. LOB functions Operate on large object data. Examples include EMPTY\_BLOB returns an empty locator of the binary large object type and EMPTY\_CLOB returns an empty locator of the character large object type. Conversion functions Perform explicit conversions of different types of data. Examples include TO\_CHAR converts a number or date to a string and TO\_NUMBER converts a string to a number. Miscellaneous functions Examples include GREATEST returns the greatest of the specified list of values and UID returns the user ID of the current Oracle session. Built in packages collections of PL SQL objects such as functions, procedures and data structures greatly expand the scope of the PL SQL language. These packages are described in detail in Feuerstein's and Beresniewicz's book Oracle Built in Packages. Built in packages are built by Oracle Corporation and stored directly in the Oracle database. The functionality of the built ins is available from any programming environment that can call PL SQL stored procedures including Visual Basic, Oracle Developer 2000, Oracle Application Server for Web based development and of course the Oracle database itself. Built in packages extend the capabilities and power of PL SQL in many significant ways. For example DBMS\_SQL executes dynamically constructed SQL statements and PL SQL blocks of code. DBMS\_PIPE communicates between different Oracle sessions through a pipe in the RDBMS shared memory. DBMS\_JOB submits and manages regularly scheduled jobs for execution inside the database. DBMS\_LOB accesses and manipulates Oracle8's large objects LOBs from within PL SQL programs. The book shows how to call all of the commonly used built in functions and packages. For packages

it also shows the RESTRICT REFERENCES pragmas needed if you call packages from a SQL statement as well as the exceptions constants and data structures defined in the packages *Oracle Built-in Packages* John Beresnievicz, Steven Feuerstein, 2000 Oracle PL SQL programming 2nd ed Oracle PL SQL programming guide to Oracle8i features Advanced oracle PL SQL programming with packages Oracle Web applications PL SQL developer s introduction Oracle built in packages Oracle PL SQL language pocket reference Oracle PL SQL built ins pocket reference **CGI Programming with Perl** Scott Guelich, Shishir Gundavaram, Gunther Birznieks, 2000 A comprehensive explanation of CGI for people who hold on to the dream of providing their own information servers on the Web This edition has been completely rewritten to use the current techniques available in Version 5 of Perl and two popular Perl modules CGI.pm and CGI\_lite plus discussions of speed up techniques such as FastCGI and mod\_perl **Designing with Javascript** Nick Heinle, Bill Peña, 2002 A guide for beginners offers an overview of JavaScript basics and explains how to create Web pages identify browsers and integrate sound graphics and animation into Web applications **ADO ActiveX Data Objects** Jason T.
