Proceeding Book of Proceeding Indonesian Textile Conference : textile 4.0 clothing and beyond (international conference) Asril Senoaji Soekoco, Karlina Somantri,Valentinus Galih Vidia Putra,2019-07-27

Welcome to the 3rd Indonesian Textile Conference ITC 2019 It is our great honor and pleasure to have you all here today Indonesian Textile Conference is by far the only scientific event in the field of textiles in Indonesia aimed to bring together leading researchers experts students and people from the industry to share their knowledge and exchange scientific ideas Indonesia is one of the leading textile exporter countries in the world with a total export value of USD 15 3 billion in 2015 and ranked the third after palm oil and steel source Ministry of Industry of Republic of Indonesia It is one of the ten priority industries and the mainstay of Indonesian national industry In a global economy and fast changing world the future of Indonesian textile industry will increasingly depend on the industry s ability to relentlessly innovate in its products to use the most advanced flexible and resource efficient processes and to focus its organizational structure as well as business operations according to the ever changing and growing needs of its customers In all that research and innovation are vital and play an ever increasing role Indonesian Textile Conference was initiated and is dedicated to promote and bring progress to research and innovation in the field of textile and textile related subjects in Indonesia Textile is a rich multidisciplinary area of study and in fact has attracted a great deal of attention and numerous contributions from non textile scientists It is not just about clothing It is all about material and all aspects that are inherent in the process of its production and applications It covers a whole lot of area which includes but not limited to advanced material and textile fibers natural fibers and natural dyes utilization of natural sources for textiles in general and or functional textiles environmental protection and ecological considerations in textile industry life cycle analysis clean green production best practices in energy efficient processes bio based polymer bioengineering nanotechnology textile based composites industrial management and engineering traditional textiles and batik textile preservation and conservation and design Smart functional and interactive textile is another area of interest which is quite recent and resulted from the convergence of latest developments in material science physics and chemistry microelectronics and informatics Stimuli responsive materials self healing polymers textile energy devices textile sensor and antenna are only a few examples of development in this area Recently added to this is a new emerging fashionable technology It is a new concept that brings fashion to the next level by integrating technology and fashion It looks at the future fashion as intersection of design fashion science and technology beyond wearable technology Still another important and interesting issue in textile is sustainability especially due to the stigma associated with the industry as the big polluter and being not environmentally friendly Sustainable textiles and clothing involves the choice of materials technologies and processing methods that ensure environmental and social friendliness and safety to human health

throughout the entire life cycle phases. Thus there is an ample room for almost everyone to contribute in this conference. On behalf of the Organizing Committee and the management of Politeknik STTT Bandung, we have a productive and fruitful conference.

Architecture and Design of Distributed Embedded Systems Bernd Kleinjohann, 2013-04-18. Due to the decreasing production costs of IT systems, applications that had to be realised as expensive PCBs formerly can now be realised as a system on chip. Furthermore, low cost broadband communication media for wide area communication as well as for the realisation of local distributed systems are available. Typically, the market requires IT systems that realise a set of specific features for the end user in a given environment, so called embedded systems. Some examples for such embedded systems are control systems in cars, airplanes, houses or plants; information and communication devices like digital TV, mobile phones or autonomous systems like service or entertainment robots. For the design of embedded systems, the designer has to tackle three major aspects: The application itself including the man-machine interface; The target architecture of the system including all functional and non-functional constraints; and the design methodology including modelling, specification, synthesis, test and validation. The last two points are a major focus of this book. This book documents the high quality approaches and results that were presented at the International Workshop on Distributed and Parallel Embedded Systems DIPES 2000, which was sponsored by the International Federation for Information Processing (IFIP) and organised by IFIP working groups WG10.3, WG10.4 and WG10.5. The workshop took place on October 18-19, 2000, in Schlo Eringerfeld near Paderborn, Germany. Architecture and Design of Distributed Embedded Systems is organised similar to the workshop. Chapters 1 and 4: Methodology I and II deal with different modelling and specification paradigms and the corresponding design methodologies. Generic system architectures for different classes of embedded systems are presented in Chapter 2. In Chapter 3, several design environments for the support of specific design methodologies are presented. Problems concerning test and validation are discussed in Chapter 5. The last two chapters include distribution and communication aspects. Chapter 6 and synthesis techniques for embedded systems. Chapter 7: This book is essential reading for computer science researchers and application developers.
