## **Chatgpt 2025:**

The Human-Centered Classroom KHRITISH SWARGIARY, 2025-11-14 Education is standing at the edge of the greatest transformation in human history For centuries schools were designed like factories students entered as raw material were processed through standardized curricula and were expected to emerge as identical products ready for the workforce That model once served a world driven by industrial labor limited information and predictable career paths But today we live in an age of artificial intelligence global connectivity cultural diversity emotional crises and unprecedented technological acceleration The old system is no longer just outdated it is dangerously inadequate This book was born from a simple but urgent question What should education look like in a world where machines can think information is infinite and human beings are searching for meaning As an educator researcher and lifelong learner I have spent years working at the intersection of inclusive education educational technology and policy driven reform Through my engagement with students teachers parents researchers and institutions one reality has become painfully clear while technology is advancing rapidly our education systems are failing to keep pace with the human needs of learners Children are more connected than ever before yet emotionally more isolated Knowledge is everywhere yet understanding is rare Tools are powerful yet compassion and creativity are often neglected This book does not argue that technology is the problem On the contrary it recognizes artificial intelligence digital learning platforms and data driven education as some of the most powerful allies humanity has ever created What we must question however is how these tools are used and whether they are designed to serve human growth or simply economic efficiency When technology is introduced without empathy it deepens inequality When used without ethics it weakens trust But when aligned with human values it becomes a force for extraordinary transformation At the heart of this book lies a conviction The future of education must be human centered emotionally intelligent and radically inclusive Every child whether gifted or struggling disabled or neurodivergent wealthy or underprivileged deserves an education that recognizes their dignity potential and individuality For far too long education systems across the world have defined success by narrow standards of academic performance while ignoring emotional wellbeing creativity adaptability and purpose The result is a generation of students who may be skilled yet uncertain knowledgeable yet disconnected from themselves and the world This book calls for a new educational philosophy one that integrates artificial intelligence with emotional intelligence digital tools with ethical responsibility and innovation with inclusion It presents a vision of classrooms where technology does not replace teachers but empowers them where data supports learning but does not erase human judgment and where every learner regardless of ability or background is seen heard and supported I have written this book not merely as an academic contribution but as a deeply personal and professional commitment to the future of education It is meant for teachers seeking meaning beyond exams policymakers looking for sustainable reform researchers pursuing impact and students who deserve a learning experience that prepares them not only for jobs but for life The world our children will

inherit will be complex uncertain and technologically advanced But it must also be compassionate fair and deeply human Education is the bridge between those two realities If we build that bridge wisely we can ensure that artificial intelligence enhances human potential rather than diminishing it and that progress never comes at the cost of dignity This book invites you to imagine design and lead that future Khritish Swargiary Author AKA KS Luminar *Challenges and Applications of Generative Large Language Models* Anitha S. Pillai,Roberto Tedesco,Vincenzo Scotti,2026-01-30 Large Language Models LLMs are a form of generative AI based on Deep Learning that rely on very large textual datasets and are composed of hundreds of millions or even billions of parameters LLMs can be trained and then refined to perform several NLP tasks like generation of text summarization translation prediction and more Challenges and Applications of Generative Large Language Models assists readers in understanding LLMs their applications in various sectors challenges that need to be encountered while developing them open issues and ethical concerns LLMs are just one approach in the huge set of methodologies provided by AI The book describing strengths and weaknesses of such models enables researchers and software developers to decide whether an LLM is the right choice for the problem they are trying to solve AI is the new buzzword in particular Generative AI for human language LLMs As such an overwhelming amount of hype is obfuscating and giving a distorted view about AI in general and LLMs in particular Thus trying to provide an objective description of LLMs is useful to any person researcher professional student who is starting to work with human language The risk otherwise is to forget the whole set of methodologies developed by AI in the last decades sticking with only one model which although very powerful has known weaknesses and risks Given the high level of hype around such models Challenges and Applications of Generative Large Language Models LLMs enables readers to clarify and understand their scope and limitations Provides a clear and objective description of LLMs with their strengths and weaknesses Demonstrates current applications of LLMs along with strengths and known issues in each application Covers not only the advantages but also risks that LLMs bring today enabling readers to understand whether a particular LLM fits the problem at hand **Managing Artificial Intelligence** Nils Urbach,Daniel Feulner,2026-01-01 Artificial intelligence AI is reshaping the way organizations operate make decisions and create value As AI systems become increasingly embedded in business processes the challenge lies not only in understanding the technology but in managing it effectively This book provides a comprehensive and structured overview of the principles strategies and practices required to integrate AI into modern organizations It spans the full AI lifecycle from foundational concepts and learning methods to the identification of use cases the implementation of AI strategies and governance mechanisms as well as the design and development of AI applications It examines how to design meaningful human AI interactions navigate workforce transformation and operate AI systems at scale Ethical legal and social dimensions are addressed to ensure that AI adoption aligns with values such as transparency fairness and accountability The book is written for decision makers professionals and students who are not only curious about AI but who want to actively shape its role in organizations

Whether you're leading AI initiatives or preparing for the future of work it provides essential guidance for leveraging AI in a strategic and impactful way After all AI hasn't yet figured out how to manage itself
