Material Practice and Materiality: Too Long Ignored in Science Education Catherine Milne, Kathryn Scantlebury, 2019-04-11 In this book various scholars explore the material in science and science education and its role in scientific practice such as those practices that are key to the curriculum focuses of science education programs in a number of countries As a construct culture can be understood as material and social practice This definition is useful for informing researchers nuanced explorations of the nature of science and inclusive decisions about the practice of science education Sewell 1999 As fields of material social practice and worlds of meaning cultures are contradictory contested and weakly bounded The notion of culture as material social practices leads researchers to accept that material practice is as important as conceptual development social practice However in education and science education there is a tendency to ignore material practice and to focus on social practice with language as the arbiter of such social practice Often material practice such as those associated with scientific instruments and other apparatus is ignored with instruments understood as inscription devices conduits for language rather than sources of material culture in which scientists share material other than words Baird 2004 p 7 when they communicate new knowledge and realities While we do not ignore the role of language in science we agree with Barad 2003 that perhaps language has too much power and with that power there seems a concomitant loss of interest in exploring how matter and machines instruments contribute to both ontology and epistemology in science and science education

Ethnography in the Open Science and Digital Age: New Debates, Dilemmas, and Issues Colin Jerolmack, Alexandra Murphy, Victoria Reyes, 2024-06-19 In the current moment ethnography is caught up in a number of debates that have led ethnographers to reflect on classic methodological and ethical dilemmas in new ways The replication crisis had led to a movement for open science e.g. registering hypotheses in advance sharing codes and data but it seems unclear that recommended best practices are appropriate to ethnography It's even up for debate whether ethnography is more of a social science or a genre The fact that many ethnographies are widely read invites questions and criticisms from beyond the ivory tower including our subjects about the ethics of representation e.g. who has license to write about whom and the extent to which journalistic standards of data verification and transparency e.g. fact checking naming sources should apply to qualitative research Some ethnographers are calling for more open critical discussions about the embodied dimensions of fieldwork including not only emotions but also issues like sexual intimacy and harassment There's also a growing expectation that ethnographers empower our subjects to represent and analyze themselves What's more as more of social life is lived online it becomes increasingly unclear where the boundaries of the field site should be drawn and whether ethnographic conventions can be applied wholesale to the study of digital spaces

Citizen Science in Southern European Archaeology Jesús Bermejo Tirado, Mattia Sanna Montanelli, Antonio Giorri, 2025-06-30 This book presents a valuable exploration of the potential for citizen science in archaeology within southern Europe The examination of citizen science in

archaeology has been heavily influenced by case studies and theories from Anglophone countries where a distinctive policy and social framework exists. However, there is currently a notable absence of consideration on the subject in the Mediterranean context. This book, through an examination of the strengths and limitations of citizen science in southern Europe, provides fresh insights and perspectives that inform the development of more effective citizen science projects in southern Europe and beyond. It seeks not only to explore the region in question but also to facilitate cross-cultural and international collaboration and promote a greater understanding of the role of citizen science in diverse contexts. The chapters feature different study approaches, legal conceptions, case studies from Spain, Italy, and Greece, methodological, technical, and critical approaches, and updates of the citizen science literature, providing readers with diverse perspectives. As the first volume about citizen science in archaeological research and practice in Southern Europe, this book is for researchers in and practitioners of citizen science, archaeology, and Mediterranean Studies.
