Fishery Management Plan and Regulatory Analysis for Spiny Lobster in the Gulf of Mexico ,1982 **Military Medicine** Armed Forces Medical Library (U.S.),1955 **Aquatic Animal Nutrition** Christian E.W. Steinberg,2022-01-03

As sequel to Aquatic Animal Nutrition A Mechanistic Perspective from Individuals to Generations the present treatise on organic macro and micronutrients continues the unique cross fertilization of aquatic ecology ecophysiology and aquaculture This treatise considers proteins and their constituents carbohydrates from mono to polysaccharides fatty acids from free acids to fat and waxes It becomes obvious that these organic nutrients are more than only simple fuel for the metabolism of animals rather their constituents have messenger and controlling function for the actual consuming individual and even for succeeding generations This aspect will become particularly clear by putting the organisms under consideration back into their ecosystem with their interrelationships and interdependencies Furthermore micronutrients such as vitamins and nucleotides as well as exogenous enzymes are in the focus of this volume with known and still to be discovered controlling physiological and biomolecular functions Aquatic Animal Nutrition Organic Macro and Micro Nutrients addresses several gaps in nutritional research and practice One major gap is the lack of common research standards and protocols for nutritional studies so that virtually incomparable approaches have to be compared This applies also to the studied animals since most approaches disregard intraspecific variabilities and the existence of epimutations in farmed individuals Furthermore recalling the Mechanistic Perspective from Individuals to Generations dietary benefits and deficiencies have effects on succeeding generations In most studies this long term and sustainable aspect is overruled by pure short term production aspects By comparing nutritional behavior and success of fishes and invertebrates Aquatic Animal Nutrition points out different metabolic pathways in these animal groups and discusses how for instance fishes would benefit when having some successful metabolic pathway of invertebrates Application of novel genetic techniques will help turn this vision into reality However a widely missing link in the current nutritional research is epigenetics regarding transgenerational heritages of acquired morphological and physiological properties To increase public acceptance nutritional optimization of farmed animals based on this mechanism rather than genetical engineering appears promising *Index-catalogue of the Library of the Surgeon General's Office, United States Army (Army Medical Library).
