All known Lake Scott Riffle Beetles in the world they show spend their lives in one spring area of Western Kansas, while the nomadic Whooping Cranes alight only a night or two in the state's central and eastern swamplands during migration. For each species, three plants, three mammals, nine birds, eight reptiles, ten amphibians, fourteen fishes, and thirteen invertebrates are listed. The guide features a full color photograph, standard common and current scientific name, range map, threatened or endangered species status, and information on appearance, size, breeding habits, surroundings, food preference, and natural history. The authors also list possible causes of species reduction from loss of habitat through land use change, water diversion, and pollution to hunting and fishing practices and natural selection. Richly illustrated and informative, this unique guide will be indispensable to anyone wanting to preserve the state's irreplaceable biological diversity.
