O.S. MAX 40 R/C

PRODUCTION of this latest .40 cu. in. radio-control engine from O.S. began in September last year and first deliveries were made to the U.K. market about six months ago. The engine has been favourably received in home and overseas markets and demand considerably outstrips supply at the present time.

This new model replaces the O.S.40-SP and O.S.40-P models introduced in 1966 and 1968, respectively, and is a completely new motor (parts are not interchangeable with those of its predecessors) in which the aim has been to improve on both the performance and durability of the previous models.

Among the features of this redesigned O.S.40 is a new piston with phosphor-bronze bushed bosses which, together with a new conrod having phosphor-bronze

bushes at both ends, should stand up rather better to the sort of abuse that occasionally caused wear problems with the 40P. The piston reverts to the Dykes type ring used in the early production 40P and now runs in a cylinder-liner of hardened chromium-molybdenum steel that has a 50 per cent larger exhaust port area. Piston stroke has been reduced (and cylinder bore enlarged correspondingly) but conrod length is slightly increased. The combustion chamber is now of the squish type and the crankshaft is rebalanced for reduced vibration. The shaft continues to run in twin ball-bearings, supplemented by a phosphor-bronze bushing between them. Mounting dimensions are the same as for the 40P except for a very slightly increased (1 mm.) frontal overhang.

A high standard of quality control is maintained during manufacture. This is seen in the finish of the individual parts of the engine and in the accuracy with which they are made, tolerances being such that the performance levels of individual engines are very closely matched. This, one might add, is something that not every manufacturer manages to achieve.
