

## INSTALLATION

Use sturdy engine mounting beams; i.e., at least as strong as would be used for a 150cc two-stroke engine. Installation should be made in such a way that basic maintenance, such as the checking and adjustment of valve tappet clearances, can be conveniently carried out. A special O.S. radial mount is available, as an optional extra part, for use where finewall type mounting is required. The needle-valve and throttle lever locations are interchangeable by reversing the carburettor. (For details, see section headed "THROTTLE VALVE ADJUSTMENT".) Decide the most convenient needle-valve and throttle lever locations before mounting the engine in the fuselage.

## INVERTED OPERATION

If your model calls for an inverted engine installation, the FS-120 will run just as well in this position, provided that the recommendations on fuel tank location are observed.

**Important:** Please refer to the notes on "CARE OF YOUR FS-120".

## INSTALLATION OF CHOKE VALVE

The FS-120 is equipped with a spring-loaded choke valve. This is fixed to the crankcase rear cover plate so that, when the choke flap is actuated, its rubber pad covers the carburettor air intake. (See Photo 1.) Insert an L-shaped actuating rod into the hole in the hexagonal port and secure it by tightening the set-screw. If the rod length is more than about 40 mm (1 1/2 in.) its outer end should be supported to avoid vibration.

**CAUTION:** Never apply an electric starter with the choke closed. Such an action will cause an excess quantity of fuel to be drawn into the cylinder and result in an hydraulic lock that may damage the engine.

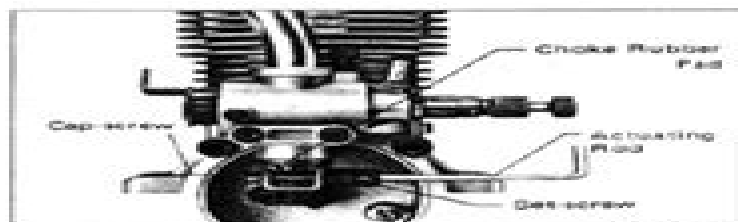

Photo. 1

## FUEL

The FS-120 runs on standard commercially available model glowplug engine fuel. Fuels containing castor-oil and/or synthetic lubricants are acceptable, but for the best performance and reliability, a fuel containing 5 - 15% nitromethane is recommended.

**IMPORTANT:** Before attempting to operate your FS-120, please read through these instructions so as to familiarize yourself with the controls and other features of the engine. Also, pay careful attention to the recommendations contained in the "Safety Instructions and Warnings" leaflet enclosed.

The O.S. FS-120 has been developed specifically to meet the revised (1983) international regulations permitting the use of four-stroke engines of up to 200cc displacement for FAI radio-controlled aerobatic and scale aircraft. It is produced by the world's oldest and largest model engine manufacturing company; a company which also pioneered the quantity production of model four-stroke motors.

The FS-120 has been designed to combine high performance with compact dimensions and moderate weight. It is built to the highest technical standards throughout and has its camshaft, as well as its crankshaft, supported in ball bearings at both ends.

## SPECIFICATIONS

Displacement	19.90 cc (1.218 cu. in.)
Bore	30.4 mm (1.197 in.)
Stroke	27.5 mm (1.083 in.)
Practical R.P.M.	2,000 - 11,000 r.p.m.
Weight	265 g (27.0 oz.)

## GLOWPLUG

With a four-stroke engine, ignition of the fuel charge takes place at every fourth stroke of the piston instead of every second stroke. Because of this, conventional two-stroke glowplugs may not suit this engine in some cases. For general use, the special O.S. Type F glowplug is recommended.

## PROPELLER

The choice of propeller depends on the design and weight of the model and on the type of flying envisaged. Determine the best size and type after practical experiment. As starting points, suggested propellers for aerobatic models are 14 x 8-9, 15 x 7-9 and 16 x 6-7, and, for scale models, 16 x 6-7, 17 x 6 and 18 x 5-6.

When using a wooden propeller, it is advisable to fix it to the drive washer with the four Allen screws and special prop washer supplied. Be sure, also, to tighten the propeller nut firmly. For safety, keep your face and other parts of the body away from the path of the propeller when starting the engine or adjusting the needle-valve while running the engine, as the propeller is a very wide with the large size propellers used on this engine. Also, refer to the "Safety Instructions and Warnings" leaflet.

**Important:** Use well balanced propellers only. An unbalanced propeller causes vibration and loss of power.

## FUEL TANK

The suggested fuel tank size is 450cc or 16 oz. This will give approximately 10 minutes running time at full power, or about 15 minutes when some part-throttle operation is included.

## STARTING

It is advisable to use an electric starter for starting, although hand-starting is also possible.

The procedure when using an electric starter is as follows.

- 1) Open the throttle valve fully and unscrew the needle-valve approximately 5 turns from the fully closed position.
- 2) It is preferable to use the choke valve for priming, although you can prime the engine through the exhaust pipe if you wish.
- 3) Close the choke valve and turn the propeller counter-clockwise 2 turns by hand.

**CAUTION:** Do not turn the propeller more than 2 turns with choke closed, otherwise the engine may suck in too much fuel and become flooded.
