Our Knowledge Is Not Primitive Decolonizing Botanical Anishinaabe Teachings:

Our Knowledge Is Not Primitive Wendy Makoons Geniusz, 2022-12-05 Traditional Anishinaabe Ojibwe or Chippewa knowledge like the knowledge systems of indigenous peoples around the world has long been collected and presented by researchers who were not a part of the culture they observed. The result is a colonized version of the knowledge one that is distorted and trivialized by an ill suited Eurocentric paradigm of scientific investigation and classification. In *Our Knowledge Is Not Primitive* Wendy Makoons Geniusz contrasts the way in which Anishinaabe botanical knowledge is presented in the academic record with how it is preserved in Anishinaabe culture. In doing so she seeks to open a dialogue between the two communities to discuss methods for decolonizing existing texts and to develop innovative approaches for conducting more culturally meaningful research in the future. As an Anishinaabe who grew up in a household practicing traditional medicine and who went on to become a scholar of American Indian studies and the Ojibwe language Geniusz possesses the authority of someone with a foot firmly planted in each world. Her unique ability to navigate both indigenous and scientific perspectives makes this book an invaluable contribution to the field of Native American studies and enriches our understanding of the Anishinaabe and other native communities.

A Not-So-New World Christopher M. Parsons, 2018-09-21 When Samuel de Champlain founded the colony of Quebec in 1608 he established elaborate gardens where he sowed French seeds he had brought with him and experimented with indigenous plants that he found in nearby fields and forests. Following Champlain's example fellow colonists nurtured similar gardens through the Saint Lawrence Valley and Great Lakes region. In *A Not So New World* Christopher Parsons observes how it was that French colonists began to learn about Native environments and claimed a mandate to cultivate vegetation that did not differ all that much from that which they had left behind. As Parsons relates colonists soon discovered that there were limits to what they

could accomplish in their gardens The strangeness of New France became woefully apparent for example when colonists found that they could not make French wine out of American grapes They attributed the differences they discovered to Native American neglect and believed that the French colonial project would rehabilitate and restore the plant life in the region However the more colonists experimented with indigenous species and communicated their findings to the wider French Atlantic world the more foreign New France appeared to French naturalists and even to the colonists themselves Parsons demonstrates how the French experience of attempting to improve American environments supported not only the acquisition and incorporation of Native American knowledge but also the development of an emerging botanical science that focused on naming new species Exploring the moment in which settlers missionaries merchants and administrators believed in their ability to shape the environment to better resemble the country they left behind *A Not So New World* reveals that French colonial ambitions were fueled by a vision of an ecologically sustainable empire
