## **Tesla Model Prices Setup:**

**Clean Disruption of Energy and Transportation** Tony Seba,2014-06-27 The industrial age of energy and transportation will be over by 2030 Maybe before Exponentially improving technologies such as solar electric vehicles and autonomous self driving cars will disrupt and sweep away the energy and transportation industries as we know it The same Silicon Valley ecosystem that created bit based technologies that have disrupted atom based industries is now creating bit and electron based technologies that will disrupt atom based energy industries Clean Disruption projections based on technology cost curves business model innovation as well as product innovation show that by 2030 All new energy will be provided by solar or wind All new mass market vehicles will be electric All of these vehicles will be autonomous self driving or semi autonomous The new car market will shrink by 80% Even assuming that EVs don t kill the gasoline car by 2030 the self driving car will shrink the new car market by 80% Gasoline will be obsolete Nuclear is already obsolete Up to 80% of highways will be redundant Up to 80% of parking spaces will be redundant The concept of individual car ownership will be obsolete The Car Insurance industry will be disrupted The Stone Age did not end because we ran out of rocks It ended because a disruptive technology ushered in the Bronze Age The era of centralized command and control extraction resource based energy sources oil gas coal and nuclear will not end because we run out of petroleum natural gas coal or uranium It will end because these energy sources the business models they employ and the products that sustain them will be disrupted by superior technologies product architectures and business models This is a technology based disruption reminiscent of how the cell phone Internet and personal computer swept away industries such as landline telephony publishing and mainframe computers Just like those technology disruptions flipped the architecture of information and brought abundant cheap and participatory information the clean disruption will flip the architecture of energy and bring abundant cheap and participatory energy Just like those previous technology disruptions the Clean Disruption is inevitable and it will be swift

Leopold, Manfred Mayr, 2022-03-29 Organizations have moved already from the rigid structure of classical project management towards the adoption of agile approaches This holds also true for software development projects which need to be flexible to adopt to rapid requests of clients as well to reflect changes that are required due to architectural design decisions With data science having established itself as corner stone within organizations and businesses it is now imperative to perform this crucial step for analytical business processes as well The non deterministic nature of data science and its inherent analytical tasks require an interactive approach towards an evolutionary step by step development to realize core essential business applications and use cases The 4th International Data Science Conference iDSC 2021 brought together researchers scientists and business experts to discuss means of establishing new ways of embracing agile approaches within the various domains of data science such as machine learning and AI data mining or visualization and communication as well as case studies and best practices from leading research institutions and business companies The proceedings include all full papers presented in the scientific track and the corresponding German abstracts as well as the short papers from the student track Among the topics of interest are Artificial Intelligence and Machine Learning Implementation of data mining processes Agile Data Science and Visualization Case Studies and Applications for Agile Data Science Organisationen sind bereits von der starren Struktur des klassischen Projektmanagements zu agilen Ansätzen übergegangen Dies gilt auch für Softwareentwicklungsprojekte die flexibel sein müssen um schnell auf die Wünsche der Kunden reagieren zu können und Änderungen zu berücksichtigen die aufgrund von Architekturentscheidungen erforderlich sind Nachdem sich die Datenwissenschaft als Eckpfeiler in Organisationen und Unternehmen etabliert hat ist es nun zwingend erforderlich diesen

entscheidenden Schritt auch für analytische Geschäftsprozesse durchzuführen. Die nicht deterministische Natur der Datenwissenschaft und die ihr innewohnenden analytischen Aufgaben erfordern einen interaktiven Ansatz für eine evolutionäre schrittweise Entwicklung zur Realisierung der wichtigsten Geschäftsanwendungen und Anwendungsfälle. Die 4. Internationale Konferenz zur Datenwissenschaft iDSC 2021 brachte Forscher, Wissenschaftler und Wirtschaftsexperten zusammen, um Möglichkeiten zu erörtern, wie neue Wege zur Umsetzung agiler Ansätze in den verschiedenen Bereichen der Datenwissenschaft wie maschinelles Lernen und KI, Data Mining oder Visualisierung und Kommunikation sowie Fallstudien und Best Practices von führenden Forschungseinrichtungen und Wirtschaftsunternehmen etabliert werden können. Der Tagungsband umfasst alle im wissenschaftlichen Track vorgestellten Volltexte und die Kurzbeiträge aus dem studentischen Track auf Englisch und die dazugehörigen Abstracts auf Deutsch. Zu den Themen, die sie interessieren, gehören unter anderem Künstliche Intelligenz und Maschinelles Lernen, Implementierung von Data Mining Prozessen, Agile Datenwissenschaft und Visualisierung, Fallstudien und Anwendungen für Agile Datenwissenschaft.
