Toutkoushian, Ulrich Teichler, 2011-06-06 This ground breaking and exhaustive analysis of university ranking surveys scrutinizes their theoretical bases methodological issues societal impact and policy implications providing readers with a deep understanding of these controversial comparators The authors propose that university rankings are misused by policymakers and institutional leaders alike They assert that these interested parties overlook the highly problematic internal logic of ranking methodologies even as they obsess over the surveys assessment of their status The result is that institutions suffer from short termism realigning their resources to maximize their relative rankings While rankings are widely used in policy and academic discussions this is the first book to explore the theoretical and methodological issues of ranking itself It is a welcome contribution to an often highly charged debate Far from showing how to manipulate the system this collection of work by key researchers aims to enlighten interested parties [World University Rankings and the Future of Higher Education](#) Downing, Kevin, Ganotice, Jr., Fraide A., 2016-10-06 Delivering quality education to students while remaining competitive at an international level is only one of the many challenges universities face today To attain their goals universities must adopt new strategies to achieve academic excellence [World University Rankings and the Future of Higher Education](#) is a pivotal reference source for the latest scholarly research on the implementation of a ranking system for higher education institutions providing a thorough overview of the impacts of these rankings on educational quality Exploring the benefits and challenges of this system in a global context this book is ideally designed for academicians researchers students administrators and policy makers interested in the effects of university rankings in the education sector and beyond

Committee on Education and Labor,2008 *Student Use of Rankings in National Magazines in the College Decision-making Process* Michele Howard McManus,2002 College rankings are widely depicted as vital tools for making informed decisions about the college selection process Based on sales volume and the diversity of ratings currently in existence there is little doubt that rankings are big business and are undeniably here to stay On the other hand very little factual information is available about students actual use of rankings in the college decision making process It is clear that rankings such as those published by US News World Report are now part of the landscape in our system of higher education However the problem is to establish the extent students use rankings and to determine user characteristics based on demographics and institutional type The paramount purpose of this research study is to determine the importance of college rankings in national magazines on students institutional choice Analysis of data provided by the Cooperative Institutional Research Program CIRP provides a greater understanding of the impact of rankings on students college decision making process Specific research questions for this study include 1 Do students perceive college rankings to be an important factor in selecting their institution of choice 2 Does the importance attached to rankings vary significantly when response patterns are examined between students attending ranked national universities and those schools that are not ranked 3 Does the importance attached to rankings vary significantly when response patterns are examined between students attending ranked national liberal arts colleges and those colleges that are not ranked 4 Does the importance attached to rankings vary significantly when response patterns are examined between students attending public or private national universities 5 Does the importance attached to college rankings in national magazines vary significantly when response patterns are examined by gender age place of residence distance from permanent home academic achievement financial status or ethnicity Utilizing two US News ranking categories a total of 40 institutions from 13 states in differing geographic regions were selected for this research Public and private institutions and ranked and unranked schools were included in this analysis In addition each of these colleges participated in the CIRP for fall 2000 For this study there are 14 541 first time full time freshmen represented in the sample Of these students 8827 attend national universities while 5714 are enrolled in liberal arts colleges The majority of students included in this study placed some level of importance on college rankings Ratings in newsmagazines are of particular importance to first time full time freshmen attending ranked private institutions In addition students who deem rankings as important are traditionally aged live on campus attend a school a significant distance from home and have a high level of financial status **U S NEWS ULTIMATE COLLEGE DIRECTORY 2004** MCGRATH ANNE (EDITOR),2003 **The Global Academic Rankings Game** Maria Yudkevich,Philip Altbach,Laura Rumbley,2016-03-02 The Global Academic Rankings Game provides a much needed perspective on how countries and universities react to academic

University Rankings, Diversity, and the New Landscape of Higher Education ,2019-02-18 University rankings are a relatively new phenomenon in higher education Although quite an established practice in the U S it is only within the last decade that attempts to analyse university performance have spread to the rest of the world and that we also have seen new global rankings appear rankings attempting to measure university performance beyond national borders No wonder that this trend is accompanied by a growing interest in studying rankings throughout the world This book is written as part of the effort to better understand rankings and their effects on higher education A serious approach towards university rankings implies that rankings should be analysed properly including the methods used and the indicators chosen and investigate the objectives claimed If university rankings are considered as consumer information then everyone should have an interest in basing such guidance on valid and reliable data and methodology A serious analysis should also discuss the wider implications of rankings as an emerging phenomenon in higher education Consequently the contributions to this book investigate and analyse how different rankings work how they reach their conclusions and on what data and methodology they are built Furthermore it provides a critical reflection about the impact of rankings on higher education how and in what way rankings influence policy making the structure of the sector or the internal life of the sector
