**Micro/Nano Integrated Fabrication Technology and Its Applications in Microenergy Harvesting** Xiao-Sheng Zhang,2015-12-01 This book presents a universal mass production micro nano integrated fabrication technology which can be used to realize micro nano hierarchical structures on Si based materials and flexible polymeric materials This fabrication technology has been systematically investigated by using experimental measurements mechanism analyses theoretical simulations and so on

Three common materials i e silicon PDMS and Parylene C with micro nano hierarchical structures have been successfully fabricated which also show several attractive properties Furthermore this book introduces this fabrication technology into microenergy field and proposes several high performance nanogenerators of which practical applications have also been studied in commercial electronic device and biomedical microsystem **Labs on Chip** Eugenio Iannone,2018-09-03 *Labs on Chip Principles Design and Technology* provides a complete reference for the complex field of labs on chip in biotechnology Merging three main areas fluid dynamics monolithic micro and nanotechnology and out of equilibrium biochemistry this text integrates coverage of technology issues with strong theoretical explanations of design techniques Analyzing each subject from basic principles to relevant applications this book Describes the biochemical elements required to work on labs on chip Discusses fabrication microfluidic and electronic and optical detection techniques Addresses planar technologies polymer microfabrication and process scalability to huge volumes Presents a global view of current lab on chip research and development Devotes an entire chapter to labs on chip for genetics Summarizing in one source the different technical competencies required *Labs on Chip Principles Design and Technology* offers valuable guidance for the lab on chip design decision making process while exploring essential elements of labs on chip useful both to the professional who wants to approach a new field and to the specialist who wants to gain a broader perspective *Forming and Machining of Polymers, Ceramics, and Composites* Matruprasad Rout,Kishore Debnath,2024-11-04 *Forming and Machining of Polymers Ceramics and Composites* targets the two important manufacturing processes where plastic deformation is involved to give the required shape and size to the raw material The main goal of the book is to represent the recent developments in the field of forming and machining of different non metals especially polymers composites and ceramics Special focus is on the advancement of these processes to manufacture components from these non metals Presents exclusive material dedicated to forming and machining of non metals that is polymers ceramics and composites Provides comprehensive coverage of all important topics related to non metals processing Covers basics and current research in the field of forming and machining of non metals Focuses on sustainability interventions and intelligent manufacturing techniques for quality and productivity in forming and machining of non metals Discusses conventional and non conventional machining and microfabrication aspects for fabrication and processing of non metals This book is aimed at graduate students and researchers in materials processing and machine design *Progress on Advanced Manufacture for Micro/Nano Technology 2005* Wunyuh Jywe,Chieh Li Chen,Kuang Chao Fan,R.F.
