de l'information de l'invention du langage celle de l'imprimerie La révolution algorithmique est sans doute la plus spectaculaire de ces externalisations car elle est incarnée par le traitement automatique de l'information. Désormais Homo Sapiens s'appuie davantage sur son téléphone que sur son cerveau pour memoriser la connaissance, s'orienter en ville ou planifier ses vacances. Cette révolution présente des opportunités fantastiques dans les sciences, la santé et la protection de l'environnement. Cependant, le déploiement du traitement automatique de l'information est aussi vite que ses effets secondaires n'ont pas eu le temps d'être anticipés. Par exemple, les algorithmes de recommandations influencent quotidiennement les croyances de milliards d'individus avec un degré de personnalisation stupéfiant. Pour le meilleur mais aussi pour le pire. Discours de haine, biais sexistes, addiction, conspirationnisme, manipulations politiques, propagande antivaccin ou encore catalyse de groupes nocifs. Boosté par des techniques de machine learning mal maîtrisées, l'information automatiquement mal traitée tue. Ce livre analyse dans un langage accessible les effets secondaires présents et les risques futurs du déploiement massif des algorithmes. Il fournit au lecteur une compréhension conceptuelle des algorithmes clés en jeu, de leurs limites et de leurs vulnérabilités. Ce livre esquisse aussi le chantier initié par une communauté croissante de chercheurs dans le but de rendre le traitement automatique de l'information robustement bienfique pour l'humanité. Il souligne les enjeux de ce fabuleux chantier, les principaux défis qu'il pose et comment chacun, expert ou non, peut apporter sa pierre à l'édifice.
