ApexComponent

Represents a Visualforce component.

For more information, see "Visualforce" in the Salesforce online Help. This type extends the [MetadataWithContent](#) metadata type and inherits its content and [fullName](#) fields.

Declarative Metadata File Suffix and Directory Location

The file suffix is `.component` for the page file. The accompanying metadata file is named `ComponentName-meta.xml`.

Visualforce components are stored in the `components` folder in the corresponding package directory.

Version

Visualforce components are available in API version 12.0 and later.

Fields

This metadata type contains the following fields:

Field Name	Field Type	Description
<code>apiVersion</code>	<code>double</code>	The API version for this Visualforce component. Every component has an API version specified at creation. This field is available in API version 16.0 and later.
<code>content</code>	<code>base64Binary</code>	The component content. Base 64-encoded binary data. Prior to making an API call, client applications must encode the binary attachment data as base64. Upon receiving a response, client applications must decode the base64 data to binary. This conversion is usually handled for you by a SOAP client. This field is
