One such approach is Mindfulness Based Cognitive Therapy MBCT a structured evidence based psychological intervention that integrates principles of cognitive therapy with mindfulness practices derived from contemplative traditions MBCT was developed in the 1990s by Zindel Segal Mark Williams and John Teasdale as a relapse prevention program for individuals with recurrent major depressive disorder MDD It was designed specifically to reduce the risk of future depressive episodes by cultivating a different relationship to thoughts emotions and bodily sensations especially those associated with depressive relapse Theoretical Foundations MBCT draws on two primary traditions Cognitive Therapy Cognitive therapy pioneered by Aaron Beck focuses on identifying and modifying maladaptive thinking patterns and cognitive distortions that contribute to emotional distress Depression is understood as partly maintained by negative automatic thoughts and dysfunctional beliefs which lead to negative mood states and behavioral withdrawal Mindfulness Meditation Mindfulness rooted in Buddhist meditation practices is the intentional and non judgmental awareness of present moment experiences including thoughts feelings and sensations Unlike rumination or avoidance mindfulness encourages observing experiences with openness and curiosity allowing for a decentered perspective that reduces emotional reactivity By integrating these approaches MBCT aims to interrupt the habitual cognitive and emotional patterns that trigger and maintain depressive episodes

Mindfulness-based Cognitive Therapy for Depression Zindel V. Segal,2002 **04 - MINDFULNESS-BASED COGNITIVE THERAPY (MBCT) IN THE TREATMENT OF MAJOR DEPRESSION. PRELIMINARY EVIDENCE FOR ITS EFFECTIVENESS AND MECHANISMS OF CHANGE, AN RCT STUDY.** John B. Nezlek,2017 Introduction Major Depressive Disorder MDD is a pervasive disorder estimated to be the leading cause of disability worldwide Although current treatments lead to improvement in majority of depressed individuals more needs to be known about new therapies modalities and their mechanisms of action Although mindfulness based cognitive therapy MBCT has been found to be effective in preventing the relapse of recurrent depression it is not clear if MBCT is effective for currently depressed individuals Objectives The aim of the current research was to evaluate if MBCT can reduce depressive symptoms and to assess mechanisms underlying such changes Methods 56 individuals with a diagnosis of MDD were randomly assigned to MBCT n 26 and Waiting List n 30 conditions Prior and post 8 weeks intervention they completed questionnaires maintained a diary for 7 days and unscrambled a list of scrambled sentences as a measure of their depressive interpretation bias Scramble Sentences Test SST with eye movements being recorded during task Results We found reduction in depressive symptoms together with increase in mindfulness in MBCT group After MBCT participants perceived events as more positive and less stressful and they used significantly fewer negation and discrepancy words Moreover they made more positive interpretations in the SST than before training fixated less on negative keywords and more on positive keywords than at the pre test No such differences were found for the waiting group Conclusions These findings suggest that MBCT can be effective in treating current depression and indicate possible mechanisms underlying therapeutic change

Mindfulness-Based Cognitive Therapy Rebecca Crane, 2008-08-18 Mindfulness Based Cognitive Therapy MBCT is increasingly used in therapeutic practice It encourages clients to process experience without judgement as it arises helping them to change their relationship with challenging thoughts and feelings and accept that even though difficult things may happen it is possible to work with these in new ways This book provides a basis for understanding the key theoretical and practical features of MBCT Focusing on a mindfulness based cognitive therapy programme that is offered in a group context to those who are vulnerable to depressive relapses the text is divided into 30 distinctive features that characterise the approach Mindfulness Based Cognitive Therapy Distinctive Features provides a concise straightforward summary for professionals and trainees in the field Its easy to use format will appeal to both experienced practitioners and newcomers with an interest in MBCT

Mindfulness-based Cognitive Therapy for Recurrent Depression and Anxiety Lauren Clare Wood, 2011
Mindfulness based Cognitive Therapy MBCT is a class based manualised program designed to treat recurrent depression and prevent relapse MBCT has been found to be effective for both symptomatic and asymptomatic patients with three or more previous episodes of depression While research estimates that 50 75% of individuals with depression also experience anxiety the role of anxiety in the MBCT treatment of recurrent depression is not clearly understood The aim of the present study was to fill this gap in the literature in order to understand the effect that MBCT has on anxiety outcomes and the effect that anxiety has on depression outcomes Sixty seven individuals with recurrent depression completed an MBCT course and were followed for up to 49 months MBCT was found to significantly reduce levels of anxiety both in the short and long term Secondly while MBCT was effective in reducing levels of depression and depressive relapse it was more effective for individuals who were not clinically anxious at the beginning of treatment The results support the use of MBCT in treating individuals with recurrent depression and co occurring anxiety in order to reduce depressive and anxiety symptoms Future research into ways that the MBCT protocol could be adapted to better accommodate individuals with anxiety may reduce the discrepancy between those with and without anxiety symptoms and greatly assist the large proportion of individuals who enroll in MBCT programs and who experience both recurrent depression and anxiety **Mindfulness-Based Cognitive Therapy for Posttraumatic Stress Disorder** Richard W. Sears, Kathleen M. Chard, 2016-03-02 MBCT for PTSD provides solid principles practical tools and numerous case examples for integrating mindfulness into PTSD treatment Based on the authors experience in the first randomized controlled clinical trial this pioneering book expands the range of potential treatment options MBCT has been growing in popularity and has solid research support but this is the first text to apply it to trauma survivors This pioneering text is based on the authors experience in using MBCT for PTSD in the first randomized controlled clinical trial Containing numerous case examples it expands the range of potential treatment options and lends new hope for trauma survivors to lead more fulfilling lives The authors combined have a unique set of expert skills Dr Chard is a well known expert on PTSD and Dr Sears is an expert on mindfulness and MBCT **Mindfulness-Based Cognitive Therapy for Bipolar Disorder** Thilo Deckersbach, Britta Hölzel, Lori Eisner, Sara W. Lazar, Andrew A. Nierenberg, 2014-07-07 Grounded in current knowledge about bipolar disorder and its treatment this book presents an empirically supported therapy program with step by step guidelines for implementation Mindfulness based cognitive therapy

MBCT for bipolar disorder is specifically designed for clients who have experienced many mood episodes and who struggle with chronic pervasive depressive and residual manic symptoms The authors provide everything needed to conduct the 12 weekly group sessions which are supplemented by regular individual sessions Reproducible tools include 29 client handouts and an Instructor Checklist Purchasers get access to a companion website featuring downloadable audio recordings of the guided mindfulness practices meditations and mindful movement plus the reproducible materials ready to download and print in a convenient 8 1 2 x 11 size A separate website for use by clients features the audio recordings only

Neuropsychological Mechanisms of Mindfulness-based Cognitive Therapy in Depression Katherine Williams,2017 **Mindfulness and the Transformation of Despair** J. Mark G. Williams,Sarah Silverton,2015-08-03 Grounded in extensive research and clinical experience this book describes how to adapt mindfulness based cognitive therapy MBCT for participants who struggle with recurrent suicidal thoughts and impulses Clinicians and mindfulness teachers are presented with a comprehensive framework for understanding suicidality and its underlying vulnerabilities The preliminary intake interview and each of the eight group mindfulness sessions of MBCT are discussed in detail highlighting issues that need to be taken into account with highly vulnerable people Assessment guidelines are provided and strategies for safely teaching core mindfulness practices are illustrated with extensive case examples The book also discusses how to develop the required mindfulness teacher skills and competencies Purchasers get access to a companion website featuring downloadable audio recordings of the guided mindfulness practices narrated by Zindel Segal Mark Williams and John Teasdale See also Mindfulness Based Cognitive Therapy for Depression Second Edition by Zindel Segal Mark Williams and John Teasdale the authoritative presentation of MBCT **Mindfulness-based Cognitive Therapy Intervention for the Treatment of Late-life Depression and Anxiety Symptoms in Primary Care** Diana Sophia Escobar Moreno,2019 Depression and anxiety are disabling psychiatric conditions worldwide Approximately 10 20% of older adults treated in primary care settings suffer from late life depression LLD and or late life anxiety LLA Older adults are often undertreated and or do not receive the appropriate treatment for LLD and or LLA in primary care due to the lack of available resources and high demands on the health care system Evidence has shown that antidepressants are the first line of treatment for LLD and LLA in older adults in primary care settings Typically the geriatric population does not respond well to psychotropic medication due to comorbidities with other illnesses and polypharmacy leading to high readmission rates As the population ages the number of older adults treated in primary care increases therefore there is an urgent need to find effective scalable and potentially cost effective alternative therapies This study examined the potential benefit that Mindfulness Based Cognitive Therapy MBCT may have on the symptoms of LLD and or LLA in older adults compared to treatment as usual TAU A sample of 61 older adults age 67 8 6 2 years with symptoms of depression and or anxiety were randomized to MBCT or TAU in a primary care setting Primary outcomes measured a post pre change in depression symptoms PHQ 9 The secondary

outcome examined a post pre changes in anxiety symptoms GAD7 anxiety scores Exploratory outcomes included a post pre changes in health related quality of life and quality of sleep The study also aimed to assess feasibility acceptability and tolerability of the MBCT intervention with the geriatric population Results from this study showed that participants in the MBCT group compared to TAU significantly improved in depressive and anxiety symptoms scores as well in the health related quality of life scores The MBCT intervention was feasible with an enrollment rate of 80.3% and an intervention completion rate of 78% The MBCT intervention was acceptable with a study retention rate of 87% Most of the participants found the MBCT intervention tolerable enjoying the mindfulness meditation intervention especially the guided meditations In conclusion the MBCT intervention may potentially benefit and give an alternative treatment for older adults in primary care suffering from depression and or anxiety symptoms Implementing these types of evidence based therapies could target more people at once and reduce the amount of staff required which may potentially lead to less costs overall To our knowledge this is the first well controlled RCT study in the field using MBCT for older adults with symptoms of depression and or anxiety in primary care Future studies are needed to replicate and to evaluate the effects of MBCT while using an active control group The long term effects of MBCT must also be studied as well as studies implementing more formal systematic diagnostic when assessing depression and or anxiety in this population
