Technologies in Biomedical and Life Sciences Education Harry J. Witchel, Michael W. Lee, 2022-06-24 This contributed volume focuses on understanding the educational strengths and weaknesses of mediated content including media as a learning supplement in comparison to traditional face to face learning Each chapter includes research on and a broad brush summary of approaches to combining life sciences education with educational technologies The chapters are organized into four main sections each of which focuses on a key question regarding the consequences of incorporating media into education In this regard the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity Further they address the ongoing discussion as to whether students need to be present for lectures and on how having agency in their own learning can improve both retention and conceptual understanding To link the content to current events the authors also shed light on the impact that the COVID 19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies Consequently the book offers life science educators valuable guidance on the technologies already available and an outlook on what is yet to come Modern Research and
