Operating Systems Principles And Practice Volume 3 Of 4:

Operating System Concepts Abraham Silberschatz,Peter B. Galvin, Greg Gagne, 2005 This new seventh edition of the book has been brought up to date to include recent developments in operating systems such as Windows XP and the new small footprint operating systems that work in hand held devices such as the Palm and in cell phones. Most of the book is on general purpose operating systems such as Linux and those from Microsoft. But at the end of the book there are chapters on other types of operating such as Real Time Operating Systems and MultiMedia OS's. Finally there are some chapters which the authors call case studies. In these one chapter goes into a detailed discussion of Linux another chapter covers Windows XP. Chapter 23 covers several early operating systems that helped to define the features that make up modern OS's. These include Atlas, XDS 940, THE, RC 4000, CTSS, MULTICS, OS 360 and MACH along with brief mentions of several others. Note that this is not a book on how to use operating systems this is a book on how operating systems are designed. It is intended for upper level undergraduate students or first year graduate students.

Adopting a step by step approach it describes power management flows, algorithms and mechanism that are employed in modern processors such as Intel Sandy Bridge, Haswell, Skylake and other architectures e.g. ARM. Further it includes practical examples and recent

studies demonstrating how modern processors dynamically manage wide power ranges from a few milliwatts in the lowest idle power state to tens of watts in turbo state. Moreover the book explains how thermal and power deliveries are managed in the context this huge power range. The book also discusses the different metrics for energy efficiency, presents several methods and applications of the power and energy estimation, and shows how by using innovative power estimation methods and new algorithms modern processors are able to optimize metrics such as power, energy and performance. Different power estimation tools are presented including tools that break down the power consumption of modern processors at sub processor, core, thread granularity. The book also investigates software, firmware and hardware coordination methods of reducing power consumption for example a compiler assisted power management method to overcome power excursions. Lastly it examines firmware algorithms for dynamic cache resizing and dynamic voltage and frequency scaling (DVFS) for memory sub systems.
