Managing Consumer Services

Enzo Baglieri, Uday Karmarkar, 2014-05-23 This book presents latest research on the evolution of consumer services as these services continue to become a larger part of the economy in the world. Four core focal points lead the central message of the book first the convergence of back and front offices second placing the client as a fundamental input of services production and delivery process and industrializing the customers role to combine efficiency and experience third the constitution and role of inputs necessary for the configuration production and delivery of the service with the crucial role of operationalizing the customers experience and fourth the adoption of new technologies and the appropriate transfer of manufacturing managerial practices through service industrialization. This is a special volume of articles based on solid research and analysis including conceptualization of the important issues as well as recommendations for managers. It presents case histories and managerial practices in some key sectors such as financial services, health care, tourism, hospitality, entertainment and media, online services and home and personal services.

Integrated Management of Processes and Information

Kenneth A. Shaw, 2013-10-15 Many process management books focus on manufacturing applications. A few discuss services applications and occasionally some comment on the information processes outside of the normal information technology IT function. When a business seeks to improve the processes it uses in order to provide efficiency and cost savings to a product or service that business needs to consider its manufacturing, service and information handling processes together because they are not independent. This book has two goals. First to help business practitioners integrate their management of manufacturing or service processes with information processes and second to provide business schools with a textbook that can be used for a basic process management course to precede or accompany the typical operations management course. Because information handling approaches vary considerably with organizational size both large and small business approaches are discussed. This discussion is focused on basic concepts rather than specific technical aspects like what type of information hardware to be used. One chapter will discuss the considerations necessary when adding information process management to enterprise resource planning, ERP, statistical process control, SPC and supply chain logistics approaches from both large and small business perspectives.

Decision Making: Recent Developments and Worldwide Applications

Stelios H. Zanakis, Georgios Doukidis, Constantin Zopounidis, 2013-04-17 This chapter describes a study conducted at the Swinburne University of Technology in Australia in their School of Business. The study was to explore

the applicability of a judgment analytic decision support system to the assessment of the likelihood of an applicant being selected for admission to the School's Graduate Certificate in Business Administration GCBA program. The likelihood of a program administrator selecting a particular applicant is directly linked to the assessment of the likelihood of that applicant's success in the GCBA program. The purpose of this study in effect was to analyze the administrative judgment process in assessment of an applicant's likelihood of success in the program. THE PROCESS OF HUMAN JUDGMENT Human judgment is a process through which an individual uses social information to make decisions. The social information is obtained from an individual's environment and is interpreted through the individual's cognitive image of the environment. The cognitive image provides a representation of the environment based on past experiences and training and essentially predisposes the person to respond to social information in predictable ways. An individual's policies or beliefs about the environment represent these patterns. Human judgments are based then upon one's interpretation of available information. They are probability statements about one's environment and how one reacts to it. This condition leads to the human judgment process being inherently limited. It is fundamentally a covert process. It is seldom possible for an individual to accurately describe his or her judgment process accurately. The Dhaka University Journal of Science, 2012 Catalog of Copyright Entries.
