comprehensive introduction to the field and equips them with the tools necessary to thrive in today's evolving global business environment **The Chittagong University Journal of Social Science**, 2008 **The Routledge Companion to Global Value Chains** Renu Agarwal, Christopher Bajada, Roy Green, Katrina Skellern, 2021-09-30 This Companion provides a review of global value chains GVCs and the megatrends that are shaping them and will continue to reshape them in deep set trajectories of change over the next few decades. Megatrends herald both challenges and opportunities. With the growing interest among business leaders and researchers in GVCs this is a reference work which fills a gap in current literature by focusing on the new features of GVCs including the shift of global purchasing power towards developing economies the significance of emerging technologies and data analytics the increasing tensions between globalisation and de-globalisation and the role of micro multinationals start up entrepreneurs the public sector and middle markets in a fast changing global economy. The early chapters are essentially intradisciplinary in character with the first seeking to explore some historical aspects of GVCs. Subsequent chapters cover the theory and practice of operations and supply chain management emerging supply chain technologies and the impact of inter firm collaboration across sectors and economies. The final chapters take a more interdisciplinary approach and examine topics at the interface of GVCs with the economy society culture and politics. This comprehensive handbook provides a timely analysis of leading edge global megatrends and practices in one volume.

Schary, Tage Skjott-Larsen, 1995 The global supply chain is a vital part of modern business. This book presents a global view of the scope and complexity of supply chain management. Three parallel elements are identified structure organization and process including activities both inside and outside of the corporation. These three elements become a supply network embracing procurement production and distribution within a single system. Building on concepts of business logistics this new perspective provides a framework and a strategic role for the supply chain in corporate strategy.

*Architecting Fail-Safe Supply Networks* Shabnam Rezapour, Amirhossein Khosrojerdi, Golnoosh Rasoulifar, Janet K. Allen, Jitesh H. Panchal, Ramakrishnan S. Srinivasan, Jeffrey D. Tew, Farrokh Mistree, 2018-09-06 A fail safe supply network is designed to mitigate the impact of variations and disruptions on people and corporations. This is achieved by 1 developing a network structure to mitigate the impact of disruptions that distort the network structure and 2 planning flow through the network to neutralize the effects of variations. In this monograph we propose a framework to develop mathematical models and provide examples of fail safe supply network design. We show that contrary to current thinking as embodied in the supply network literature disruption management decisions made at the strategic network design level are not independent from variation management decisions made at the operational level. Accordingly we suggest that it is beneficial to manage disruptions and variations concurrently in supply networks. This is achieved by architecting fail safe supply networks which are characterized by the following elements: reliability, robustness, flexibility, structural controllability and resilience. Organizations can use the framework presented in this monograph to manage variations and disruptions. Managers can select the best operational management strategies for their supply networks considering variations in supply and demand and identify the best network restoration strategies including facility fortification, backup inventory, flexible production capacity, flexible inventory and transportation route reconfiguration. The framework is generalizable to other complex engineered networks.

**Logistics Sector Developments**, 2008 The study examines policy options relating to the establishment and further development of inland logistics centres and dry ports with an international role. It provides the Economic and Social Commission for Asia and the Pacific (ESCAP) secretariat with a solid base to engage in further research and analysis in this area in order to present countries with policy options in developing inland logistics centres and dry ports. It examines at the extent to which the concept of a seaport can be applied inland. The publication also developed a cluster concept applied to industry in particular to the logistics and port industry. It also provides Governments and industry with an initial step by step

process to evaluate the potential of future logistics centres and dry ports
