How to Build a Lab-on/in-Fiber Libo Yuan, 2025-03-27 This book explores the technical foundations of constructing diverse laboratories on optical fiber In recent years microstructured based optical fiber devices and sensors have emerged as a rapidly advancing area within the field of optical fiber sensing technology The concept of creating a laboratory on optical fiber has been inspired by advances in micro structured fiber optics Given the natural existence of optical waveguide channels within fibers it is feasible to integrate a wide range of materials such as inorganic organic biological and nonlinear optical substances into or onto the fiber s end face or side This integration facilitates the interaction between light and matter leading to measurable optical outcomes through the fiber s optical channel The rapid evolution of this concept is driven by the ease with which strong interactions can be achieved between light and matter at the micro nano scale within the fiber making it an ideal platform for experiments in lightwave microscale physics photochemistry and the interaction between light and both biological and microbial materials The fiber optics laboratory thus offers a compelling stage for interdisciplinary research endeavors This book serves as a comprehensive and systematic introduction to the core techniques involved in establishing various laboratories on fiber complemented by practical examples that illustrate the purpose methodology and technical approaches to developing fiber based laboratories It stands as an invaluable reference for students and researchers intrigued by the cutting edge advancements in fiber optic technology
