(An Application and Comparison of Models Used to Predict the Winner of the Academy Award for Best Picture). Joshua Slayton,2021 Each year the Academy of Motion Picture Arts and Sciences recognizes exceptional achievements in cinema with its Oscars ceremony Of all the awards handed out at this annual celebration the Academy Award for Best Picture is arguably the most coveted This project involves using historical Oscars data as well as data from other awards shows such as the Golden Globes to develop and compare models for predicting the winners of the Academy Award for Best Picture In particular models using both logistic regression and decision tree classification will be developed Model performance will be evaluated using the leave one out cross validation procedure to compute prediction accuracies and root mean square errors

for each model These measures will allow direct comparisons between the models to be made which should lead to some interesting results For example models that incorporate more than just Oscar nominations data perform better unsurprisingly than those that do not Also as will be discussed the decision tree classification models all have higher prediction accuracies than their corresponding logistic regression models The predictions that the best logistic regression and decision tree classification models got most incorrect will be explored Finally the models generated through this project will be applied to make predictions for this year s Best Picture winner to be announced on April 25 2021
