Perspective, Projections and Design Mario Carpo, Frédérique Lemerle, 2013-04-15 The essays selected for this book presented in chronological order discuss various aspects of image making technologies geometrical knowledge and tools for architectural design focusing in particular on two historical periods marked by comparable patterns of technological and cultural change. The first is the Renaissance characterized by the rediscovery of linear perspectives and the simultaneous rise of new formats for architectural drawing and design on paper the second the contemporary rise of digital technologies and the simultaneous rise of virtual reality and computer based design and manufacturing. Many of the contributing authors explore the parallel between the invention of the perspectival paradigm in early modern Europe and the recent development of digitized virtual reality. This issue in turn bears on the specific purposes of architectural design where various representational tools and devices are used to visualize bi dimensional aspects of objects that must be measured and eventually built in three dimensional space. Visual Culture and Mathematics in the Early Modern Period Ingrid Alexander-Skipnes, 2017-01-06 During the early modern period there was a natural correspondence between how artists might benefit from the knowledge of mathematics and how mathematicians might explore through advances in the study of visual culture new areas of enquiry that would uncover the mysteries of the visible world. This volume makes its contribution by offering new interdisciplinary approaches that not only investigate perspective but also examine how mathematics

enriched aesthetic theory and the human mind. The contributors explore the portrayal of mathematical activity and mathematicians as well as their ideas and instruments how artists displayed their mathematical skills and the choices visual artists made between geometry and arithmetic as well as Euclid's impact on drawing artistic practice and theory. These chapters cover a broad geographical area that includes Italy, Switzerland, Germany, the Netherlands, France and England. The artists, philosophers and mathematicians whose work is discussed include Leon Battista Alberti, Nicholas Cusanus, Marsilio Ficino, Francesco di Giorgio, Leonardo da Vinci and Andrea del Verrocchio as well as Michelangelo, Galileo, Piero della Francesca, Girard Desargues, William Hogarth, Albrecht Dürer, Luca Pacioli and Raphael.

*Parents with Mental and/or Substance Use Disorders and their Children, volume III* Anja Wittkowski, Joanne Nicholson, Jean Lillian Paul, Geneviève Piché, 2025-07-30

Families living with parental mental and/or substance use disorders continue to face considerable biopsychosocial challenges with complex pathways to mitigating risk, enhancing resilience and supporting recovery. An ecological life span approach to improving outcomes for all family members, infants, children, adolescents and adults who are parents requires careful consideration of sociocultural conditions, life stages and developmental ages alongside family focused needs, goals and plans. In addition, community contexts, policy developments and practice innovation play roles in contributing to the wellbeing and functioning of all family members. The risk conveyed to all family members by parental mental and/or substance use disorders is great. Fortunately, the opportunities to intervene are plentiful and varied. However, in many cases, interventions are unspecified, untested and not brought to scale in regional, state or national initiatives. We may have the requisite knowledge to inform policy and practice, but this evidence may not be applied to effect innovation or change, suggesting the need for widespread knowledge translation and dissemination efforts with significant potential to improve public mental health.
