How We Struggle Sian Lazar, 2023-01-20 A comparative ethnographic approach to the question of labour struggles and workers political agency A masterful book a resource that makes anthropology matter Andrea Muehlebach Professor of Anthropology University of Bremen When it comes to labor movements unionized industrial workers on the factory floor have only ever been part of the picture Across so many different workplaces sectors of the economy and geographical contexts the question of how working people struggle in the day to day has no single answer Here Sian Lazar offers a unique anthropological perspective on labor agency that takes in examples from across the globe from heavy industry and agriculture to the service and informal sectors She asks how do people strive to improve their lives and working conditions How are they constrained and enabled in that struggle by the nature of the work they do and by their own positionality in local histories cultures and networks How We Struggle explores worker action across the spectrum from organized trade unionism to individualized strategies of accommodation resistance and escape The book marries a discussion of global political economy and Marxist feminist theories of labor with ethnographic approaches that begin from a perspective of human experience kinship and radical heterogeneity

□□□□ ,2016-08 *Media Review Digest* C. Edward Wall,2004 **Untangling the Double Helix** James C. Wang,2009

The problem of unraveling two intertwined strands during the duplication of DNA was recognized shortly after the proposal of the DNA double helix structure in 1953 A group of enzymes called DNA topoisomerases solve this problem by breaking and rejoining DNA molecules in a controlled manner thereby allowing strands to be passed through each other and thus untangled not just during DNA replication but also during many other basic cellular processes Because of their intimate involvement in the workings of the cell topoisomerases are also the logical targets of many antibiotics including Cipro and anticancer agents This book written by James Wang the discoverer of the first topoisomerase and a leader in the field since presents ten chapters covering the historical backdrop of the DNA entanglement problem and the discovery of the DNA topoisomerases how DNA topoisomerases perform their magic in DNA replication transcription genetic recombination and chromosome condensation and how they are targets of therapeutic agents The book should appeal to readers from undergraduates upwards with interests in the biological and clinical aspects of topoisomerase function or in the mathematics and physics of topology **Business Publication Advertising Source** ,2003-11 **Therapeutic Modalities in**
