Janke,2014-09-18 A comprehensive exploration of the mathematics behind the modeling and rendering of computer graphics scenes Mathematical Structures for Computer Graphics presents an accessible and intuitive approach to the mathematical ideas and techniques necessary for two and three dimensional computer graphics Focusing on the significant mathematical results the book establishes key algorithms used to build complex graphics scenes Written for readers with various levels of

mathematical background the book develops a solid foundation for graphics techniques and fills in relevant graphics details often overlooked in the literature Rather than use a rigid theorem proof approach the book provides a flexible discussion that moves from vector geometry through transformations curve modeling visibility and lighting models Mathematical Structures for Computer Graphics also includes Numerous examples of two and three dimensional techniques along with numerical calculations Plenty of mathematical and programming exercises in each chapter which are designed particularly for graphics tasks Additional details at the end of each chapter covering historical notes further calculations and connected concepts for readers who wish to delve deeper Unique coverage of topics such as calculations with homogeneous coordinates computational geometry for polygons use of barycentric coordinates various descriptions for curves and L system techniques for recursive images Mathematical Structures for Computer Graphics is an excellent textbook for undergraduate courses in computer science mathematics and engineering as well as an ideal reference for practicing engineers researchers and professionals in computer graphics fields The book is also useful for those readers who wish to understand algorithms for producing their own interesting computer images **Computer Supported Cooperative Work in Design I** Weiming Shen,Zongkai Lin,Jean-Paul A. Barthès,Tangqiu Li,2005-11-04 The design of complex artifacts and systems requires the cooperation of multidisciplinary design teams using multiple commercial and non commercial engineering tools such as CAD tools modeling simulation and optimization software engineering databases and knowledge based systems Individuals or individual groups of multidisciplinary design teams usually work in parallel and separately with various engineering tools which are located on different sites often for quite a long time At any moment individual members may be working on different versions of a design or viewing the design from various perspectives at different levels of detail In order to meet these requirements it is necessary to have effective and efficient collaborative design environments These environments should not only automate individual tasks in the manner of traditional computer aided engineering tools but also enable individual members to share information collaborate and coordinate their activities within the context of a design project CSCW computer supported cooperative work in design is concerned with the development of such environments
