**Influence of flight control laws on structural sizing of commercial aircraft** Rahmetalla Nazzeri ,2021-11-15 The increasing demand for new civil aircraft pushes aircraft manufacturers to develop innovative solutions that lead in particular to mass reductions One way to achieve these kinds of improvements is the use of multidisciplinary analysis and optimization In this sense the intention of this PhD thesis is to develop a multidisciplinary framework in order to quantify the impact of load alleviation function parameter changes on structural components like the wing and fuselage in terms of resulting mass changes The developed iterative process chain covers the loads calculation including an active load alleviation system a structural assessment of the wing and fuselage components and a dedicated feedback loop in order to update mass and stiffness properties of the loads calculation model The study shows that significant mass reductions are achievable while on the other hand estimated mass penalties are irrelevant      **Responsible Manufacturing** Ammar Y. Alqahtani, Elif Kongar, Kishore K. Pochampally, Surendra M. Gupta, 2019-02-25 Responsible Manufacturing has become an obligation to the environment and to society itself enforced primarily by customer perspective and governmental regulations on environmental issues This is mainly driven by the escalating deterioration of the environment such as diminishing raw material resources overflowing waste sites and increasing levels of pollution Responsible Manufacturing related issues have found a large following in industry and academia which aim to find solutions to the problems that arise in this newly emerged research area Problems are widespread including the ones related to the lifecycle of products disassembly material recovery

remanufacturing and pollution prevention Organized into sixteen chapters this book provides a foundation for academicians and practitioners and addresses several important issues faced by strategic tactical and operation planners of Responsible Manufacturing Using efficient models in a variety of decision making situations it provides easy to use mathematical and or simulation modeling based solution methodologies for the majority of the issues Features Addresses a variety of state of the art issues in Responsible Manufacturing Highlights how popular industrial engineering and operations research techniques can be effectively exploited to find the most effective solutions to problems Presents how a specific issue can be approached or modeled in a given decision making situation Covers strategic tactical and operational systems issues Provides a foundation for academicians and practitioners interested in building bodies of knowledge in this new and fast growing area
