Davison, Robert Andrew McDougal, Hans Ekkehard Plesser, 2020-07-09 *Individual Variation and the Bilingual Advantage - Factors that Modulate the Effect of Bilingualism on Cognitive Control and Cognitive Reserve* Maurits Van den Noort, Peggy Bosch, Esli Struys, 2020-02-11 The number of bilingual and multilingual speakers around the world is steadily growing leading to the questions How do bilinguals manage two or more language systems in their daily interactions and how does being bilingual multilingual affect brain functioning and vice versa Previous research has shown that cognitive control plays a key role in bilingual language management This hypothesis is further supported by the fact that foreign languages have been found to affect not only the expected linguistic domains but surprisingly other non linguistic domains such as cognitive control attention inhibition and working memory Somehow learning languages seems to affect executive brain functioning In the literature this is referred to as the bilingual advantage meaning that people who learn two or more languages seem to outperform monolinguals in executive functioning skills In this Special Issue we first present studies that investigate the bilingual advantage We also go one step further by focusing on factors that modulate the effect of bilingualism on cognitive control In the second smaller part of our Special Issue we focus on the cognitive reserve hypothesis with the aim of addressing the following questions Does the daily use of two or more languages protect the aging individual against cognitive decline Does lifelong bilingualism protect against brain diseases such as dementia later in life **Methods and protocols in nanotoxicology** Bengt Fadeel, Maria Dusinska, 2023-01-27

Systems Thinking Cliff Whitcomb, Heidi Davidz, 2021-01-20. This *Systems Thinking* Special Issue contains 12 papers on the nature of systems thinking as it applies to systems engineering, systems science, system dynamics and related fields. Systems thinking can be broadly considered the activity of thinking applied in a systems context, forming a basis for fundamental approaches to several systems disciplines including systems engineering, systems science and system dynamics. Although these are somewhat distinct fields, they are bound by common approaches in regard to systems. Whereas systems engineering seeks to apply a multidisciplinary holistic approach to the development of systems, systems science seeks to understand the basics related to systems of all kinds from natural to man-made, and system dynamics seeks to understand system structures in order to influence its dynamics. Man-made systems have become more ubiquitous and complex. The study of systems, both natural and engineered, presents new challenges and opportunities to understand emergent dynamic behaviors that inform the process of sense-making based on systems thinking.
