Modelling and Control of Biotechnological Processes A. Johnson, Alan Johnson, 1986 **Biotechnology R&D in the EC** A. Vassarotti, E. Magnien, 1990 **Biotechnology: Measuring, modelling, and control** Hans-Jürgen Rehm, Gerald Reed, 1991 This volume covers monitoring of the biotechnological process with sophisticated analytical techniques use of the resulting data by means of mathematical models and computer aided control for improvement of the productivity of biotechnological processes The book consists of four main parts instruments for analysis and biosensing measuring techniques process models and their automation and control The use of different cell types recombinant microorganisms and reactor conditions are presented and all present strategies of monitoring and optimizing cell growth and product formation are discussed with regard to improved productivity Topics included are Methods and Instruments Biosensors Characterization of Bioreactors Determination of Cell Concentration Cell Models Stirred Tank Models Tower Reactor Models Process Models Control of Bioreactor Systems Automation Control of Downstream Processing **Modeling and Control of Biotechnical Processes 1992, (2nd IFAC Symposium) and Computer Applications in Fermentation Technology (5th International Conference)** Mohammed Nazmul Karim, G. Stephanopoulos, 1992 Hardbound This volume provides the state of the art findings of control theory and applications of biotechnical processes Topics covered include neural networks and their applications modeling identification AI and expert systems Bioprocess Monitoring and Control Bernd Hitzmann, 2020 Process monitoring and control are fundamental to all processes this holds especially for bioprocesses due to their complex nature Usually bioprocesses deal with living cells which have their own regulatory systems It helps to adjust the cell to its environmental condition This must not be the optimal condition that the cell needs to produce whatever

is desired Therefore a close monitoring of the cell and its environment is essential to provide optimal conditions for production Without measurement no information of the current process state is obtained In this book methods and techniques are provided for the monitoring and control of bioprocesses From new developments for sensors the application of spectroscopy and modelling approaches the estimation and observer implementation for ethanol production and the development and scale up of various bioprocesses and their closed loop control information are presented The processes discussed here are very diverse The major applications are cultivation processes where microorganisms were grown but also an incubation process of bird s eggs as well as an indoor climate control for humans will be discussed Altogether in 12 chapters nine original research papers and three reviews are presented
