 Wolfgang Grodd,Philippe Chassy,2016-08-09 Despite the importance of mathematics in our educational systems little is
 known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope
 to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much
 progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the
 fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording
 experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has
 demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of
 arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are
 identified we can move onto the stage where we seek to understand how these basics skills are used to support the
 acquisition and use of abstract mathematical concepts *Everyday Mathematics Teacher Lesson Guide Volume 1 Grade 4*
