Biomarker Discovery in the Developing World: Dissecting the Pipeline for Meeting the Challenges Sanjeeva Srivastava, 2016-09-30 This book is oriented towards post graduates and researchers with interest in proteomics and its applications in clinical biomarker discovery pipeline Biomarker discovery has long been the research focus of many life scientists globally However the pipeline starting from discovery to validation to regulation as a diagnostic or therapeutic molecule follows a complex trajectory This book aims to provide an in depth synopsis on each of these developmental phases attendant to biomarker life cycle with emphasis on the emerging and significant role of proteomics The book begins with a perspective on the role of biorepositories and need for biobanking practices in the developing world The next chapter focuses on disease heterogeneity in context to geographical bias towards susceptibility to the disease and the role of multi omics techniques to devise disruptive innovations towards biomarker discovery Chapter 3 focuses on various omics based platforms that are currently being used for biomarker discovery their principles and workflow Mass spectrometry is emerging as a powerful technology for discovery based studies and targeted validation Chapter 4 aims at providing a glimpse of the basic workflow and considerations in mass spectrometry based studies Rapid and aptly targeted research funding has often been deemed as one of the decisive factors enabling excellent science and path breaking innovations With the need for sophistication required in multi omics research Chapter 5 focuses on innovative funding strategies such as crowdfunding and Angel philanthropy Chapter 6 provides the latest advances in education innovation the premise and reality of bioeconomy especially in a specific context of the developing world not to mention the new concept of social innovation to link biomarkers with socially responsible and sustainable applications Chapter 7 in ways similar to biomarkers discusses the biosimilars as a field that has received much focus and prominence recently due to their immense potential in clinical and pharmaceutical innovation literatures The broader goal post biomarker discovery is to translate their use in clinics However the road from bench to bed side is arduous and complex that is subject to oversight from various national and international regulatory bodies Chapter 8 underscores these regulatory science considerations and provides a concise overview on intellectual property rights in biomarker discovery Thus this book contributed by eminent biomarker scientists clinicians translational researchers and social scientists holistically covers the various facets of the biomarker discovery journey from cell to society in developing world The lessons learned and highlighted here are of interest to the life sciences community in a global and

interdependent world **Plants, Stress & Proteins** Dipanjana Ghosh, Qingsong Lin, Jian Xu, Hanjo A. Hellmann, 2017-09-08 Biotic and abiotic stress factors deliver a huge impact on plant life. Biotic stress factors such as damage through pathogens or herbivore attack as well as abiotic stress factors like variation in temperature, rainfall, and salinity have placed the plant kingdom under constant challenges for survival. As a consequence, global agricultural and horticultural productivity has been disturbed to a large extent. Being sessile in nature, plants cannot escape from the stress and instead adapt changes within their system to overcome the adverse conditions. These changes include physiological, developmental, and biochemical alterations within the plant body which influences the genome, proteome, and metabolome profiles of the plant. Since proteins are the ultimate players of cellular behavior, proteome level alterations during and recovery period of stress provide direct implications of plant responses towards stress factors. With current advancement of modern high throughput technologies, much research has been carried out in this field. This e-book highlights the research and review articles that cover proteome level changes during the course or recovery period of various stress factors in plant life. Overall, the chapters in this e-book have provided a wealth of information on how plants deal with stress from a proteomics perspective.

Radiation Proteomics Dariusz Leszczynski, 2013-02-03

Methods of proteomics have been shown to be powerful tools in search of target proteins that respond in cells to an internal or an external stimulus. Proteomics is widely used in biomedical research. However, in radiation biology research following exposures of living matter to low doses of either ionizing or non-ionizing radiation, the proteomics approach is only very slowly gaining support. This book, by presenting the current status of the use of proteomics in radiation biology, will help to attract
