Measuring Urban Design Metrics For Livable Places Metropolitan Planning Design:

Measuring Urban Design Reid Ewing, Otto Clemente, 2013-07-20 What makes strolling down a particular street enjoyable The authors of Measuring Urban Design argue it's not an idle question. Inviting streets are the centerpiece of thriving sustainable communities but it can be difficult to pinpoint the precise design elements that make an area appealing. This accessible guide removes the mystery, providing clear methods to measure urban design. In recent years many walking audit instruments have been developed to measure qualities like building height, block length, and sidewalk width. But while easily quantifiable, these physical features do not fully capture the experience of walking down a street. In contrast, this book addresses broad perceptions of street environments. It provides operational definitions and measurement protocols of five intangible qualities of urban design, specifically imageability, visual enclosure, human scale, transparency, and complexity. The result is a reliable field survey instrument grounded in constructs from architecture, urban design, and planning. Readers will also find a case study applying the instrument to 588 streets in New York City, which shows that it can be used effectively to measure the built environment's impact on social, psychological, and physical well-being. Finally, readers will find illustrated step-by-step instructions to use the instrument and a scoring sheet for easy calculation of urban design quality scores. For the first time, researchers, designers, planners, and lay people have an empirically tested tool to measure those elusive qualities that make us want to take a stroll. Urban policymakers and planners, as well as students in urban policy design and environmental health, will find the tools and methods in Measuring Urban Design especially useful.

Best Practices in Metropolitan Transportation Planning Reid Ewing, Keith Bartholomew, 2018-06-27 Planning at a metropolitan scale is important for effective management of urban growth, transportation systems, air quality, and watershed and green spaces. It is fundamental to efforts to promote social justice and equity. Best Practices in Metropolitan Transportation Planning shows how the most innovative metropolitan planning organizations (MPOs) in the United States are addressing these issues using their mandates to improve transportation networks while pursuing emerging sustainability goals at the same time. As both a policy analysis and a practical how-to guide, this book presents cutting-edge original research on the role accessibility plays and should play in transportation planning, tracks how existing plans have sought to balance competing priorities using scenario planning and other strategies, assesses the results of various efforts to reduce automobile dependence in cities, and explains how to make planning documents more powerful and effective. In highlighting the most innovative practices implemented by MPOs, regional planning councils, city and county planning departments, and state departments of transportation, this book aims to influence other planning organizations as well as influence federal and state policy discussions and legislation.

Connecting Places, Connecting People Reena Tiwari, 2017-09-07

What is a better community? How can we reconfigure places and transport networks to create environmentally friendly, economically sound and socially just communities? How can we meet the challenges of growing pollution, depleting fossil fuels, rising gasoline prices, traffic congestion, traffic fatalities, increased prevalence of obesity and lack of social inclusion? The era of car based planning has led to the disconnection of people and place in developed countries and is rapidly doing so in the developing countries of the Global South. The unfolding mega trend in technological innovation while adding new patterns of future living and mobility in the cities will question the relevance of face to face connections. What will be the glue that holds

communities together in the future To build better communities and to build better cities we need to reconnect people and places Connecting Places Connecting People offers a new paradigm for place making by reordering urban planning principles from prioritizing movement of vehicles to focusing on places and the people who live in them Numerous case studies including many from developing countries in the Global South illustrate how this can be realized or fallen short of in practical terms Importantly citizens need to be engaged in policy development to connect with each other and with government agencies To measure the connectivity attributes of places and the success of strategies to meet the needs an Audit Tool is offered for a continual quantitative and qualitative evaluation *Urban Design for an Urban Century* Lance Jay Brown,David Dixon,Oliver Gillham,2009 Featuring projects that have won awards in recent years this is a comprehensive book of tools and information on urban design This guide provides urban designers architects and students with contemporary urban design paradigms and principles processes and design tools for various project types and scales *Streets as Public Spaces and Drivers of Urban Prosperity* Gora Mboup,2013 **Environment and Planning** ,2005 Journal of urban planning and design Publishes research in the application of formal methods methods models and theories to spatial problems involving the built environment and the spatial structure of cities and regions Includes the application of computers to planning and design in particular the use of shape grammars artificial intelligence and morphological methods to buildings and towns the use of multimedia and GIS in urban and regional planning and the development of ideas concerning the virtual city **By Design** Great Britain.
