**Mechanizing Mathematical Reasoning** Dieter Hutter,Werner Stephan,2011-03-29 By presenting state of the art results in logical reasoning and formal methods in the context of artificial intelligence and AI applications this book commemorates the 60th birthday of J rg H Siekmann The 30 revised reviewed papers are written by former and current students and colleagues of J rg Siekmann also included is an appraisal of the scientific career of J rg Siekmann entitled A Portrait of a Scientist Logics AI and Politics The papers are organized in four parts on logic and deduction applications of logic formal methods and security and agents and planning    **Mechanizing Mathematical Reasoning** Werner Stephan (informatico.),Dieter Hutter,2005    [Mechanization of Reasoning in a Historical Perspective](#) ,2023-03-13 This volume is written jointly by Witold Marciszewski who contributed the introductory and the three subsequent chapters and Roman Murawski who is the author of the next ones those concerned with the 19th century and the modern inquiries into formalization algebraization and mechanization of reasonings Besides the authors there are other persons as well as institutions to whom the book owes its coming into being The study which resulted in this volume was carried out in the Historical Section of the research project Logical Systems and Algorithms for Automatic Testing of Reasoning 1986 1990 in which participated nine Polish universities the project was coordinated by the Department of Logic Methodology and Philosophy of Science of the Bia lystok Branch of the University of Warsaw and supported by the Ministry of Education some of its results are reported in Srzednicki Ed 1987 The major part of the project was focussed on the software for computer aided theorem proving called Mizar MSE Multi Sorted first order logic with Equality reported in Marciszewski 1994a due to Dr Andrzej Trybulec He and other colleagues deserve a grateful mention for a hands on experience and theoretical stimulants owed to their collaboration    [Mathematical Reasoning](#) Raymond Nickerson,2011-02-25 The development of mathematical competence both by humans as a species over millennia and by individuals over their lifetimes is a fascinating aspect of human cognition This book explores when and why the rudiments of mathematical capability first appeared among human beings what its fundamental concepts are and how and why it has grown into the richly branching complex of specialties that it is today It discusses whether the truths of mathematics are discoveries or inventions and what prompts the emergence of concepts that appear to be descriptive of nothing in human experience Also covered is the role of esthetics in mathematics What exactly are mathematicians seeing when they describe a mathematical entity as beautiful There is discussion of whether mathematical disability is distinguishable from a general cognitive deficit and whether the potential for mathematical reasoning is best developed through instruction This volume is unique in the vast range of psychological questions it covers as revealed in the work habits and products of numerous mathematicians It provides fascinating reading for researchers and students with an interest in cognition in general and mathematical cognition in particular Instructors of mathematics will also find the book s insights illuminating    **Logic, Language, Information, and Computation** Ulrich

Kohlenbach,Pablo Barceló,Ruy J G B de Queiroz,2014-08-23 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the 21st Workshop on Logic Language Information and Communication WoLLIC 2014 held in Valparaiso Chile in September 2014 The 15 contributed papers presented together with 6 invited lectures were carefully reviewed and selected from 29 submissions The focus of the workshop was on the following subjects Inter Disciplinary Research involving Formal Logic Computing and Programming Theory and Natural Language and Reasoning

Wolfgang Bibel,P.H. Schmitt,2013-03-09 We are invited to deal with mathematical activity in a systematic way one does expect and look for pleasant surprises in this requirement of a novel combination of psychology logic mathematics and technology Hao Wang 1970 quoted from Wang 1970 The field of mathematics has been a key application area for automated theorem proving from the start in fact the very first automatically found theorem was that the sum of two even numbers is even Davis 1983 The field of automated deduction has witnessed considerable progress and in the last decade automated deduction methods have made their way into many areas of research and product development in computer science For instance deduction systems are increasingly used in software and hardware verification to ensure the correctness of computer hardware and computer programs with respect to a given specification Logic programming while still falling somewhat short of its expectations is now widely used deductive databases are well developed and logic based description and analysis of hard and software is commonplace today

### **Proof Technology in**

**Mathematics Research and Teaching** Gila Hanna,David A. Reid,Michael de Villiers,2019-10-02 This book presents chapters exploring the most recent developments in the role of technology in proving The full range of topics related to this theme are explored including computer proving digital collaboration among mathematicians mathematics teaching in schools and universities and the use of the internet as a site of proof learning Proving is sometimes thought to be the aspect of mathematical activity most resistant to the influence of technological change While computational methods are well known to have a huge importance in applied mathematics there is a perception that mathematicians seeking to derive new mathematical results are unaffected by the digital era The reality is quite different Digital technologies have transformed how mathematicians work together how proof is taught in schools and universities and even the nature of proof itself Checking billions of cases in extremely large but finite sets impossible a few decades ago has now become a standard method

of proof Distributed proving by teams of mathematicians working independently on sections of a problem has become very much easier as digital communication facilitates the sharing and comparison of results Proof assistants and dynamic proof environments have influenced the verification or refutation of conjectures and ultimately how and why proof is taught in schools And techniques from computer science for checking the validity of programs are being used to verify mathematical proofs Chapters in this book include not only research reports and case studies but also theoretical essays reviews of the state of the art in selected areas and historical studies The authors are experts in the field **Philosophy of Computing** Björn Lundgren,Nancy Abigail Nuñez Hernández,2022-05-04 This book features a unique selection of works presented at the 2019 annual international conference of the International Association for Computing and Philosophy IACAP Every contribution has been peer reviewed revised and extended The included chapters are thematically diverse topics include epistemology dynamic epistemic logic topology philosophy of science and computation game theory and abductive inferences automated reasoning and mathematical proofs computer simulations scientific modelling applied ethics pedagogy human robot interactions and big data algorithms and artificial intelligence The volume is a testament to the value of interdisciplinary approaches to the computational and informational turn We live in a time of tremendous development which requires rigorous reflection on the philosophical nature of these technologies and how they are changing the world How can we understand these technologies How do these technologies change our understanding of the world And how do these technologies affect our place as humans in the world These questions and more are addressed in this volume which is of interest to philosophers engineers and computer scientists alike

**Mathematics Mechanization and Applications** Xiao-Shan Gao,Dongming Wang,2000-07-25 Mathematics Mechanization and Applications provides surveys for major research developments on mechanizing algebraic equations solving and geometric theorem proving with diverse applications accomplished in Wu's extended Chinese group The book addresses the frontiers of research with new and original ideas and results includes sophisticated and successful applications to scientific and engineering problems covers polynomial system solving geometric reasoning computer algebra and mathematical software is comprehensive and focused and easy to read with a uniform presentation contains an extensive bibliography of high value for reference to western readers This book is of interest to researchers software developers and graduate students in symbolic and algebraic computation automated theorem proving algorithmic mathematics and computer aided mathematical problem solving It is relevant for researchers and university teachers in computer aided instruction and education and for engineers and practitioners in mechanics computer aided geometric design geometric modelling and robotics People in many other related areas from pure mathematics to computer aided design particularly those who know of the Wu method but have little knowledge of it or the work that has arisen around it will also find the book good reading **From Mathematics to Philosophy (Routledge Revivals)** Hao Wang,2016-06-10 First published in 1974 Despite the tendency of contemporary analytic philosophy to put

logic and mathematics at a central position the author argues it failed to appreciate or account for their rich content Through discussions of such mathematical concepts as number the continuum set proof and mechanical procedure the author provides an introduction to the philosophy of mathematics and an internal criticism of the then current academic philosophy The material presented is also an illustration of a new more general method of approach called substantial factualism which the author asserts allows for the development of a more comprehensive philosophical position by not trivialising or distorting substantial facts of human knowledge

**The Philosophy of Jaakko Hintikka** Randall E. Auxier,Lewis Edwin Hahn,2006

One of the world s most influential logicians Jaakko Hintikka is a leading figure on the international philosophical scene Here he responds to his critics The 27 critical and descriptive essays in this book written by important scholars from a variety of fields challenge Hintikka s innovations in philosophy logic and linguistics His replies and the essays themselves all previously unpublished form a lively provocative exchange of ideas Also included is an intellectual autobiography and a complete bibliography of Hintikka s writings
