The Computational Mind, **The Representational Theory of Mind** Kim Sterelny, 1991 This book is not a conventional introduction to the philosophy of mind nor is it a contribution to the physicalist dualist debate Instead The Representational Theory of Mind demonstrates that we can construct physicalist theories of important aspects of our mental life Its aim is to explain and defend a physicalist theory of intelligence in two parts the first six chapters consist of an exposition elaboration and defence of human sentience the functionalist theory of mind and the second part considers rivals and objections to this theory Kim Sterelny aims to introduce people to this area of philosophy by exemplifying it to show that philosophical and empirical investigations can be synthesized to the benefit of both From publisher's description

The Mechanical Mind in History Phil Husbands, Owen Holland, Michael Wheeler, 2008 The idea of intelligent machines has become part of popular culture Tracing the history of the actual science of machine intelligence reveals a rich network of cross disciplinary contributions and the origins of ideas now central to artificial intelligence artificial life cognitive science and neuroscience

Mind's I Douglas Hofstadter, Daniel Clement Dennett, 1981-11-26 ISBN 0576504624X LCCN 8166099

Mentality and Machines Keith Gunderson, 1985 Mentality and Machines was first published in 1985 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions Mentality and Machines with a new preface and an extended postscript is a general essay on the philosophy of mind oriented to philosophical and psychological questions about real as well as imagined robots and machines The second edition retains all of the essays from the original book

including Gunderson's influential critique *The Imitation Game* of A.M. Turing's treatment of the question 'Can machines think' and his controversial distinction between program receptive and program resistant aspects of the mind. This edition's postscript includes further reflections on these themes and others and relates them to recent writings of other philosophers and computer scientists.

Representation and Reality Cogan University Professor Emeritus Hilary Putnam, Hilary Putnam, 1988 Hilary Putnam who may have been the first philosopher to advance the notion that the computer is an apt model for the mind takes a radically new view of his own theory of functionalism in this book. Putnam argues that in fact the computational analogy cannot answer the important questions about the nature of such mental states as belief, reasoning, rationality and knowledge that lie at the heart of the philosophy of mind.

Mind in Action Pentti Määtänen, 2015-04-11 The book questions two key dichotomies: that of the apparent and real and that of the internal and external. This leads to revised notions of the structure of experience and the object of knowledge. Our world is experienced as possibilities of action and to know is to know what to do. A further consequence is that the mind is best considered as a property of organisms' interactions with their environment. The unit of analysis is the loop of action and perception and the central concept is the notion of habit of action which provides the embodied basis of cognition as the anticipation of action. This holds for non-linguistic tacit meanings as well as for linguistic meanings. Habit of action is a teleological notion and thus opens a possibility for defining intentionality and normativity in terms of the soft naturalism adopted in the book. The mind is embodied and this embodiment determines our physical perspective on the world. Our sensory organs and other instruments give us instrumental access to the world and this access is epistemic in character. The distinction between the physical and conceptual viewpoint allows us to define truth as the correspondence with operational fit. This embodied epistemic truth is however not a sign of antirealism as the instrumentally accessed theoretical objects are precisely those objects that experimental science deals with.

Matter and Consciousness Paul M. Churchland, 1988 In *Matter and Consciousness* Paul Churchland clearly presents the advantages and disadvantages of such difficult issues in philosophy of mind as behaviorism, reductive materialism, functionalism and eliminative materialism. This new edition incorporates the striking developments that have taken place in neuroscience, cognitive science and artificial intelligence and notes their expanding relevance to philosophical issues. Churchland organizes and clarifies the new theoretical and experimental results of the natural sciences for a wider philosophical audience, observing that this research bears directly on questions concerning the basic elements of cognitive activity and their implementation in real physical systems. How is it he asks that living creatures perform some cognitive tasks so swiftly and easily where computers do them only badly or not at all? Most significant for philosophy Churchland asserts is the support these results tend to give to the reductive and the eliminative versions of materialism.
