Mechanical Operations For Chemical Engineers By Bhattacharya:

Mechanical Operations for Chemical Engineers C. M. Narayanan, B. C. Bhattacharya, 2011 **Mechanical Operations for Chemical Engineers** C. M. Narayanan, B. C. Bhattacharyya, 1992

Electromagnetic, Mechanical, and Transport Properties of Composite Materials Rajinder Pal, 2014-08-27

In the design processing and applications of composite materials a thorough understanding of the physical properties is required. It is important to be able to predict the variations of these properties with the kind shape and concentration of filler materials. The currently available books on composite materials often emphasize mechanical properties and focus on classification, applications and manufacturing. This limited coverage neglects areas that are important to new and emerging applications. For the first time in a single source this volume provides a systematic, comprehensive and up to date exploration of the electromagnetic, electrical, dielectric and magnetic, mechanical, thermal and mass transport properties of composite materials. The author begins with a brief discussion of the relevance of these properties for designing new materials to meet specific practical requirements. The book is then organized into five parts examining:

- The electromagnetic properties of composite materials subjected to time invariant electric and magnetic fields
- The dynamic electromagnetic properties of composite materials subjected to time varying electric and magnetic fields
- The mechanical elastic and viscoelastic properties of composites
- Heat transfer in composites and thermal properties
- Thermal conductivity, thermal diffusivity, coefficient of thermal expansion and thermal emissivity

Mass transfer in composite membranes and composite materials. Throughout the book the analogy between various properties is emphasized. **Electromagnetic, Mechanical, and Transport Properties of Composite Materials** provides both an introduction to the subject for newcomers and sufficient in depth coverage for those involved in research. Scientists, engineers and students from a broad range of fields will find this book a comprehensive source of information.

Minerals and Coal Process Calculations D.V. Subba Rao, 2016-12-08

The aim of process calculations is to evaluate the performance of minerals and coal processing operations in terms of efficiency of the operation, grade of the final products and recovery of the required constituents. To meet these requirements in depth, detailed calculations are illustrated in this book. This book is designed to cover all the process calculations. The method and/or steps in process calculations have been described by taking numerical examples. Process calculations illustrated in a simple and self-explanatory manner based on two basic material balance equations will allow the reader to understand the contents thoroughly. Inclusion of elaborate process calculations in every chapter is the highlight of this book. This book is unique and devoted entirely to the process calculations with sufficient explanation of the nature of the calculations. This book will prove useful to all from student to teacher, operator to engineer, researcher to designer and process personnel to plant auditors concerned with minerals and coal processing.

Food Bioconversion Alexandru Mihai Grumezescu, Alina Maria Holban, 2017-06-29

Food Bioconversion Volume Two in the Handbook of Food Bioengineering series is an interdisciplinary resource of fundamental information on waste recovery and biomaterials under

certain environmental conditions The book provides information on how living organisms can be used to transform waste into compounds that can be used in food and how specialized living cells in plants animals and water can convert the most polluting agents into useful non toxic products in a sustainable way This great reference on the bioconversion of industrial waste is ideal in a time when food resources are limited and entire communities starve Presents extraction techniques of biological properties to enhance food s functionality i e functional foods or nutraceuticals Provides detailed information on waste material recovery issues Compares different techniques to help advance research and develop new applications Includes research solutions of different biological treatments to produce foods with antibiotic properties i e probiotics Explores how bioconversion technologies are essential for research outcomes to increase high quality food production
