*Improving Modern Code Review Leveraging Contextual and Structural Information from Source Code*  
Ohiduzzaman Shuvo,2023 Review comments are a major building block of modern code reviews Ensuring the quality of code review comments is essential but manually writing high quality review comments is technically challenging and time consuming Over the years there have been numerous attempts to automatically assess and recommend code review comments but they could be limited in several aspects First according to existing evidence various development practices including code reviews could be drastically different between open and closed source systems However only a little research has been done to better understand how existing techniques might perform differently when assessing the code reviews from open and closed source systems Second existing techniques that recommend or generate code review comments often suffer from a lack of scalability e g requirements of specialized hardware by Deep Learning models and generalizability e g use of only one programming language In this thesis we a conduct an empirical study to better understand the challenges of existing techniques for code review assessment and b propose a novel scalable technique for review comment recommendation First we empirically investigate how existing techniques perform in assessing code reviews from open

source and closed source systems We find that the performance of existing techniques significantly differs when assessing code reviews from these two types of systems Our findings also suggest that less experienced developers submit more non useful review comments to both systems which warrants for automated support in writing code reviews Second to help developers write better review comments we propose a novel technique RevCom that recommends relevant review comments by leveraging various code level changes with structured information retrieval Our technique outperforms both IR based and DL based baselines while being lightweight scalable and has the potential to reduce the cognitive effort and time of the reviewers
