Ang, 2021-06-23 This advanced undergraduate graduate textbook teaches students in finance and economics how to use R to analyse financial data and implement financial models It demonstrates how to take publically available data and manipulate implement models and generate outputs typical for particular analyses A wide spectrum of timely and practical issues in financial modelling are covered including return and risk measurement portfolio management option pricing and fixed income analysis This new edition updates and expands upon the existing material providing updated examples and new chapters on equities simulation and trading strategies including machine learnings techniques Select data sets are available online

**The Design Imperative** Steven Chen, 2018-05-26 This book examines how to optimize design management processes in order to produce innovation within organizations It first looks at how to harvest a culture of design and then examines topics specific to product and service design Individual chapters provide anecdotes drawn from leading design oriented firms and best practices based on cutting edge scientific research This book s unique blend of theory and application will offer students scholars and managers valuable insight on how organizations can revolutionize their design processes and leverage their approach to create groundbreaking products and services

**Coordinating the Internet** Fredrik Lindeberg, 2019-12-10 M nga sj lvklarheter i v rt digitala samh lle r beroende av Internet f r att fungera Allt fr n smarta d rrar f r hemtj nster till sj lvscanningsapparaterna p ICA till nyare bilar moderna tillverkningsrobotar telefoner och aff rssystem Den h r licentiatavhandlingen reder ut vad Internet r hur det styrs och vad det har f r praktiska konsekvenser Tidigare forskning finns bland annat inom telekommunikation d r Internet liknas vid andra telekommunikationstj nster s som kabel TV eller mobiltelefoni och inom digitalisering b de inom management och informationssystem d r Internet i det n rmaste tas f r givet som teknisk infrastruktur H r tar jag en ansatts d r jag f rklarar Internet ur ett kombinerat tekniskt och organisatoriskt perspektiv Studien r principiellt uppdelad i tre delar Den f rsta delen fokuserar p att begreppsm ssigt hitta ett s tt att diskutera Internet utan att essentiella aspekter faller bort s som styrningen eller konsekvenser av den tekniska designen Jag landar i att Internet r b de ett tekniskt och ett organisatoriskt fenomen Tekniskt i bem rkelsen att det handlar om digital paketbaserad kommunikation dvs att olika paket kan ta olika v g och att det inte finns ett beroende p en viss specifik v g eller

krets vilket kan särskiljas från exempelvis kretskopplad kommunikation dvs en specifik väg från sändare till mottagare eller rent analog kommunikation I denna tekniska dimension är Internet förhållandevis likt klassisk telekommunikation såsom kabel TV och mobiltelefoni och förlitar sig på best effort paketbaserad kommunikation I den andra dimensionen styrning och organisation är Internet ett explicit bottom up fenomen som styrs med andra principer och ideal än klassisk telekommunikation Till sin utformning är denna minsta möjliga koordination som krävs för att möjliggöra koordinering av de tekniska unika identifierare som behövs för att Internet ska fungera dvs idag DNS och BGP förorna av protokoll för användning av namn och nummer på Internet Båda dimensionerna de organisatoriska och tekniska följer samma designprinciper och generellt är det meningsfullt att se Internet som en ekologi av aktörer snarare än en organisation i strikt teoretiska termer exempelvis finns ingen tydlig vergränsande strategi organisationsnummer eller lönebetalare Det är dessa designprinciper som ligger väl i linje med systemarkitektursprinciper för datorsystem som är orsaken till Internets lager design där man generellt inte ska bry sig om vad som händer på andra lager än sitt eget beskrivet som separation of concerns eller i dubbel negation high cohesion i texten samt att ha en minimalistisk ansats till koordinering och enbart koordinera eller skapa beroenden mellan enheter både tekniskt och organisatoriskt är det verkligen som beskrivet som minimum coordination eller low coupling i texten Den andra delen fokuserar på hur Internet kan socialt påverkas eller förändras till något annat eller till något med en annan funktion sett som en styrd organisation Jag använder begreppet social robusthet som motpol till teknisk robusthet som i hur man tekniskt kan förstås Internet för att diskutera dessa aspekter Slutsatserna här mynnar ut i att Internets explicita bottom up och problemsupplägnings design gör det möjligt för någon att medvetet påverka Internet för att ändra dess beskaffenhet och dessutom visar jag att även om man praktiskt lyckas ta över de formellt beslutande är den exempelvis ICANNs och IETFs styrelser så finns det inga formella eller praktiska hinder för att bara ignorera dem dvs switching costs för just ICANN eller IETF är låga om man tekniskt omständligt med att konfigurera om rutter och routing tabeller och betydligt enklare än att gå från IPv4 till IPv6 där utrustning kan behövas ersättas och därmed en betydligt högre switching cost Med andra ord det är enklare att byta ut Internets koordinerare än att byta ut Internet mot något som fungerar annorlunda Däremot är den rådande politiska världssituationen ett hot mot Internet eftersom den regelstyrda och koordinerade världssituationen inte längre är lika självklar som den varit tidigare Den tredje och sista studien fokuserar på neutralitet dvs rätten till tverksoperatörer har att fånga värde i andra dimensioner än trafikmängd som en praktiskt effekt av hur Internet styrs och fungerar Det primära praktiska bidraget är att neutralitet inte förstås som enbart en reglerings och lagstiftningfråga utan det är mer relevant att prata om i termer av neutralitet i praktiken I den bemärkelsen är lagstiftningens vara eller inte vara mindre intressant än praktisk neutralitets vara eller inte vara och en tyngdpunktsförflyttning i den offentliga debatten hade varit diskussionen närmare hur Internet fungerar Sammanfattningsvis ger Internets designprinciper att marknadskrafter och ej direkt reglering ska möjliggöra neutralitet För att förtydliga tanken är att det ska finnas konkurrens inom de flesta nivåer eller lager och att det är av vikt att

det finns konkurrens rakt igenom så att en kundvilja för paketneutralitet på tjänstenivån påverkar nätgar och infrastrukturnivå så att det råvar användarnas efterfrågan som leder till neutralitet om den användarviljan finns. Dock kan det mycket väl vara så att man som användare inte är intresserad av neutralitet och då ska tjänsteleverantörer nätgar och infrastrukturoperatörer inte heller tvingas vara neutrala genom lagstiftning då det går stik i stv med designprinciperna. Inte heller ska en grupp vilja kring neutralitet påverka andras möjligheter att vilja. Genomgående identifierar jag två kolliderande världsbilder: den distribuerade regelstyrda och koordinerade ordningen i sitt perspektiv med sin förklaringskraft och den mer integrerande och suveräna världsordningen med sitt perspektiv och sin förklaringskraft. Rent praktiskt uppfyller Internet en önskad funktion i den tidigare men ej i den senare designmässigt byggda för att tilltå snarare än kontrollera och bestämma. Exempelvis finns det inte inbyggda tekniska mekanismer i Internet för att till exempel möjliggöra statlig vervakning eller kontroll av material som finns tillgängligt och då ligger det mer i statens intresse att ha kontrollerade telekommunikationstjänster som kabel TV, mobiltelefoni och liknande lösningar där man inte helt enkelt kan lägga på ett extra lager för att uppnå kryptering, anonymitet eller tillgång till andra tjänster. I texten använder jag perspektiven tillsammans med teknologi, marknader och byråkrati för att följa upp dynamiken och strömningarna i Internet, ekologin och jämför med tekniska samhällsförändringar som exempelvis järnvägsnät, postverk och finansiella marknader. Jag konstaterar att Internet har varit styrt av teknologiskt baserade värderingar till skillnad från de andra exemplen som i huvudsak har utformats av dynamiken mellan byråkrati och marknad. I denna mån föreligger jag att teknologi kan användas som strömning och motperspektiv till den klassiska uppställningen med byråkrati och marknad för att beskriva fenomen i digitaliseringens tidsålder. Avhandlingen sätter även pågående trender i ett bredare perspektiv mot både organisation och teknik och trycker på vikten av att först delarna var för sig och tillsammans för att på ett rikare sätt måla upp helheten. The modern society is to a large extent Internet dependent. Today we rely on the Internet to handle communication for smart doors, self-scanning convenience stores, connected cars, production robots, telephones and ERP systems. The purpose of this thesis is to unbundle the Internet: its technology, its coordination and practical and theoretical consequences. Earlier research has in telecommunications focused on the Internet as one of many potential telecommunications services such as cellphones or cable TV, and the management and information systems field has by and large treated the Internet as black boxable infrastructure. This thesis explains the Internet from the combined perspectives of technology and coordination. This text contains three empirical studies. The first is focused on conceptualizing and discussing the Internet in a meaningful way using both technology and coordination frameworks. I unceremoniously conclude that the Internet is both a technological and a coordination phenomenon and neither of these aspects can be ignored. The Internet is technological in that it concerns digital packet-switched digital communication as opposed to circuit-switched or purely analog communications. The technological dimension of the Internet is similar in its constituency to classical telecommunications networks and has best effort mechanisms for packet delivery. In the other dimension, coordination, the

Internet is an explicit bottom up phenomenon minimally coordinated or governed by other ideals than classical telecommunications networks and systems At its core this least necessary coordination concerns technical unique identifiers necessary for inter network communication in practice today manifested as naming with the DNS protocol suite and numbering with the BGP protocol suite Both dimensions follow similar design characteristics the design of the technical Internet is similar to the design of the coordination of the Internet These design principles which are well aligned with software design principles is the cause of the Internet s layered design separation of concerns in practice and minimal view of coordination the least coordinated Internet In general terms it is fruitful to view the Internet and involved actors as an ecology rather than one organization or entity in need of governance or control The second study looks at the social resilience of the Internet That is is it possible through social means to change what the Internet is or can be viewed as I use social resilience as a counterpart to technical resilience i e resilience to technical interference In essence the bottom up and separations of concerns design of the coordination aspect of the Internet minimizes possible influence of actors intent on mission disruption I also practically show that even a take over of the central councils have little effect the constituency of the Internet since these councils are not invested with formal powers of enforcement This thesis suggests that the cost of switching from ICANN and IETF to another set of organizations is quite low due to the nature of the coordination of the Internet compared to for example switching all equipment to IPv6 capable equipment However the current political situation is a threat to the current Internet regime since an international and rule based world order is no longer on all states agendas The final empirical study focus on the practical and theoretical implications of the Internet on the case of net neutrality The primary contribution is that de facto and de jure net neutrality differ in practice and as such de facto net neutrality deserves more attention Also I suggest that any regulation either for or against net neutrality is problematic since such regulation would interfere with the inherent coordination mechanisms of the Internet As such regulation should focus on providing the necessary markets for Internet function given the coordination and design of the Internet As a net neutrality example net neutral Internet access options should exist as part of a natural service offering if wanted by customers not due to direct regulation Throughout the thesis I identify two colliding world orders both in terms of digital communication networks and terms of organizing society in general the rule based and coordinating order with its champions and the integrated or sovereign order with its champions In practical terms the Internet can be considered a want in the former the distributed perspective but not the later the integrative perspective since the Internet lacks inherent technical controls for surveillance and content control which are necessary in a world order where borders are important Regardless of if that importance stems from state oversight or intellectual property rights legislation I use these perspectives together with technology markets and bureaucracy to catch the dynamics of the Internet ecology I then compare these dynamics with other technological and societal phenomena such as railway networks postal services and financial markets And conclude that the

Internet as conceptualized in this thesis can best be explained by technological values in opposite to the other examples which can best be explained by the dynamics of markets and bureaucracies without any real influence of the values of technology. As such I suggest that the classical frame of markets and bureaucracy can fruitfully be expanded with technology to better explain the Internet and similar digitization phenomena. This thesis puts current trends in a broader perspective based on technology and organization where the two perspectives together better can draw the full picture in a rich fashion.

Tesla Model S is the new 21st century automotive leader. Discover the electrifying facts about this unusual car that you simply have to plug in, charge up, and take off. **Tesla Model S - Best Car Ever!** Frank Van Gylluwe, 2014 *Ludicrous*

Edward Niedermeyer, 2019-08-20 Tesla is the most exciting car company in a generation but can it live up to the hype? Tesla Motors and CEO Elon Musk have become household names shaking up the staid auto industry by creating a set of innovative electric vehicles that have wowed the marketplace and defied conventional wisdom. The company's market valuation now rivals that of long-established automakers and to many industry observers Tesla is defining the future of the industry. But behind the hype Tesla has some serious deficiencies that raise questions about its sky-high valuation and even its ultimate survival. Tesla's commitment to innovation has led it to reject the careful zero-defects approach of other car manufacturers even as it struggles to mass-produce cars reliably and with minimal defects. While most car manufacturers struggle with the razor-thin margins of mid-priced sedans, Tesla's strategy requires that the Model 3 finally bring it to profitability even as the high-priced Roadster and Model S both lost money. And Tesla's approach of continually focusing on the future even as commitments and deadlines are repeatedly missed may ultimately test the patience of all but its most devoted fans. In *Ludicrous* journalist and auto industry analyst Edward Niedermeyer lays bare the disconnect between the popular perception of Tesla and the day-to-day realities of the company and the cars it produces. Blending original reporting and never-before-published insider accounts with savvy industry analysis, Niedermeyer tells the story of Tesla as it's never been told before with clear eyes, objectivity, and insight. **Tesla Model 3 Revealed**, 2019-03-28

The Tesla Motor Company takes its name from the scientist and inventor and the AC motor that it uses in its vehicles is a direct descendant of Tesla's 1882 design, showing how far-reaching and ahead of its time his thinking really was. Nikola Tesla was one of the great innovative geniuses and forward thinkers of the 19th and 20th centuries. He contributed significantly to the development of the alternating current electric supply system and invented among many other things the Tesla coil, an electrical transformer that is still widely used. His work fell into obscurity until fairly recently when the surge of interest in projects such as electric cars and some other more bizarre theories and fads brought his ideas back to the forefront of technology and popular culture. **Tesla Model X: Best Features Buyer's Guide** Philip Tranton, 2015-12-24
