Appropriate treatment of the underlying cause of the infection is the most important measure to prevent the spread of infection. In addition, the use of antibiotic prophylaxis in patients with a history of recurrent infection has been shown to reduce the incidence of infection. The use of antibiotic prophylaxis in patients with a history of recurrent infection has been shown to reduce the incidence of infection.

ANSWER

long enough to let the 20000 very faint objects in the field appear as points of light. The resulting images are then processed to determine the position and magnitude of every point of light in the entire image.

These findings suggest that the use of a single, or other psychometrically acceptable, measure of health is much more likely to identify patients at high risk.
