Caldwell, 2016-09-16 Excerpt from A Laboratory Manual for Work in General Science Laboratory work and the experiences of home and school furnish an important basis for the course in general science The following outlines for experiments and demonstrations have been developed so as to include the exercises which have proved most valuable for use in the first year of the high school The outlines are the result of the cooperative work of several high school teachers through a period of years and have been tried with more than a thousand pupils Experiments other than those here included have been tried but through constant trial elimination and addition the work has assumed its present form It is the purpose of the outlines to direct the pupils into the habit of finding out about many kinds of common problems in science To do this in the best way common materials are used for experimentation since common and simple phenomena are likely to be more educative for young pupils than those which are uncommon and complex The materials needed are listed in connection with each exercise It is hoped that teachers will encourage pupils to use their own initiative in devising new ways to perform the experiments as well as in working out additional problems which are sure to be suggested in the discussion of the experiments here outlined At the close of the directions for work one or more additional problems are suggested and the use of these as topics for discussion will make the work more valuable The exercises have been planned so that each one requires a shorter period of continuous attention than is usually true in the more advanced laboratory work in high school science Experience has shown that first year pupils work more effectively when the units of work assigned are

relatively short and definite This plan results in a larger number of exercises than would be used in a more advanced course inscience In many cases however two or more exercises may be performed in a single laboratory period Supplementary or alternative experiments which sometimes require more complex apparatus are often given These supplementary experiments are indicated by the same arabic number as the preceding experiment but with a letter added Thus 22a is an experiment which may be used in addition to or instead of Exercise 22 About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
