Nonlinear Physics With Mathematica For Scientists And Engineers:

Nonlinear Physics with Mathematica for Scientists and Engineers Richard H. Enns, George C. McGuire, 2012-12-06
Nonlinear physics continues to be an area of dynamic modern research with applications to physics engineering chemistry mathematics computer science biology medicine and economics In this text extensive use is made of the Mathematica computer algebra system No prior knowledge of Mathematica or programming is assumed This book includes 33 experimental activities that are designed to deepen and broaden the reader's understanding of nonlinear physics These activities are correlated with Part I the theoretical framework of the text *Nonlinear Physics with Mathematica for Scientists and Engineers* Richard H. Enns, George McGuire, 2001-01-01 CD ROM contains illustrative nonlinear examples solved with Mathematica

Nonlinear Physics with Maple for Scientists and Engineers Richard Enns, George McGuire, 2013-11-27
Philosophy of the Text This text has been designed to be an introductory survey of the basic concepts and applied mathematical methods of nonlinear science Students in engineering physics chemistry mathematics computing science and biology should be able to successfully use this text In an effort to provide the students with a cutting edge approach to one of the most dynamic often subtle complex and still rapidly evolving areas of modern research nonlinear physics we have made extensive use of the symbolic numeric and plotting capabilities of Maple V Release 4 applied to examples from these disciplines No prior knowledge of Maple or computer programming is assumed the reader being gently introduced to Maple as an auxiliary tool as the concepts of nonlinear science are developed The diskette which accompanies the text gives a wide variety of illustrative nonlinear examples solved with Maple An accompanying laboratory manual of experimental activities keyed to the text allows the student the option of hands on experience in exploring nonlinear phenomena in the REAL world Although the experiments are easy to perform they give rise to experimental and theoretical complexities which are not to be underestimated

The Level of the Text The essential prerequisites for the first eight chapters of this text would normally be one semester of ordinary differential equations and an intermediate course in classical mechanics

Mathematical Models in Economics - Volume I Wei-Bin Zhang, 2009-06-10
Mathematical Models in Economics is a component of Encyclopedia of Mathematical Sciences in which is part of the global Encyclopedia of Life Support Systems EOLSS an integrated compendium of twenty one Encyclopedias This theme is organized into several different topics and introduces the applications of mathematics to economics Mathematical economics has experienced rapid growth generating many new academic fields associated with the development of mathematical theory and computer Mathematics is the backbone of modern economics It plays a basic role in creating ideas constructing new theories and empirically testing ideas and theories Mathematics is now an integral part of economics The main advances in modern economics are characterized by applying mathematics to various economic problems Many of today's profound insights into economic problems could hardly be obtained without the help of mathematics The concepts of equilibrium versus non

equilibrium stability versus instability and steady states versus chaos in the contemporary literature are difficult to explain without mathematics The theme discusses on modern versions of some classical economic theories taking account of balancing between significance of economic issues and mathematical techniques These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Lost and Found in Mathematics. Dissident cosmologists's guide to the Universe Victor Christianto, Florentin Smarandache, 2022-09-01 This book is inspired by a German theoretical physicist Sabine Hossenfelder's publication *Lost in Mathematics* Her book seems to question highly mathematical and a lot of abstraction in the development of physics and cosmology studies nowadays There is clear tendency that in recent decades the physics science has been predominated by such an advanced mathematics which at times sounding more like acrobatics approach to a reality Through books by senior mathematical physicists like Unzicker and Peter Woit we know that the answer of TOE is not in superstring theories or other variations of such 26 dimensional bosonic string theory of which none of those theories survived experimental test but perhaps in low dimensional physics As Alexander Unzicker suggests perhaps it is more advisable to consider rotation in 3D space known as $SO(3)$ or a kind of superfluid vortices version of gravitation theory We can also reconsider proposition by the late Prof F Winterberg formerly professor at Univ Nevada Reno that it is most likely that superfluid phonon roton theory in 3D can replace the entire superstring theories While we don't explore yet implications of his model to particle physics we discuss here some published papers at several journals in the past few years
